

List of figures

Figure 1.1 Location of excavated sites in western Arnhem Land, relative to land greater than 200 m above sea level (ASL).	2
Figure 2.1 Location of Wulk Lagoon study area, western Arnhem Land, Northern Territory.	22
Figure 2.2 Composite rock art phases.	28
Figure 2.3 Survey area showing location of rock art sites.	31
Figure 2.4 Types of archaeological materials present at rock art sites (n = 77 sites).	31
Figure 2.5 Distribution of rock art sites, showing number of artworks in each site.	32
Figure 2.6 Proportion of sites with each rock art style (n = 77 sites).	32
Figure 2.7 Proportion of sites with each type of zoomorph (n = 77 sites).	33
Figure 2.8 Number of paintings by fish taxa.	33
Figure 2.9 Painting manner for fish, by topographic zone.	34
Figure 2.10 Proportion of sites with paintings of anthropomorphs and items of material culture (n = 77 sites).	34
Figure 2.11 Number of paintings by colour, sites MN01, MN05 and MN12.	35
Figure 2.12 Number of artworks by motif type, sites MN01, MN05 and MN12.	35
Figure 2.13 Distribution of panel sizes, sites MN01, MN05 and MN12 (n = 65 panels).	35
Figure 2.14 Frequency of impacts on rock art across 65 rock art panels, sites MN01, MN05 and MN12.	35
Figure 2.15 Site MN05.	36
Figure 2.16 Relative frequency of rock art sites and motifs by temporal phase (number of sites = 77; estimated number of motifs = 13,000).	37
Figure 2.17 Proportion of motifs, panels and sites by topographic zone (number of motifs = 13,000; number of panels = 459; number of sites = 77).	38
Figure 2.18 Number of rock art sites by phase and topographic zone.	38
Figure 2.19 Sum of the number of different art styles represented per site, by phase and topographic zone.	39
Figure 2.20 Example of complex late Holocene art scene, Wulk Lagoon site RLL004.	40
Figure 3.1 Location of Ingaanjalwurr and other key sites mentioned in this chapter, in relation to topography.	52
Figure 3.2 View towards Red Lily Lagoon from the escarpment at the rear of Ingaanjalwurr.	53
Figure 3.3 Ingaanjalwurr rockshelter from the north.	53
Figure 3.4 An example of the red painted anthropomorphs of Ingaanjalwurr.	55
Figure 3.5 A white-infilled red-outlined painting (sorcery figure) from Ingaanjalwurr.	55

Figure 3.6 Digital tracings of photographed beeswax images from Ingaanjalwurr (images are at different scales to each other).	56
Figure 3.7 Beeswax image of a fish, with arrow indicating location from which Sample 1 was taken.	57
Figure 3.8 Unidentified beeswax quadruped from Ingaanjalwurr.	58
Figure 3.9 Painting of a fish with head broken to assist with carrying, Injalak Hill.	58
Figure 3.10 Single row of beeswax pellets, with arrow indicating location from which Sample 2 was taken.	59
Figure 4.1 Location of the Djawumbu Madjawarrnja massif in relation to the township of Jabiru and the Jabiluka mineral lease.	70
Figure 4.2 Four typical spearthrower types recorded during the Mirarr Gunwarddebim project (not to scale).	71
Figure 4.3 Type A (rectilinear) long-necked spearthrowers from Mirarr Country.	73
Figure 4.4 Type B (curvilinear) long-necked spearthrowers from Mirarr Country.	74
Figure 4.5 Type C (concave-sided) and Type D (multi-sided) long-necked spearthrowers from Mirarr Country.	74
Figure 4.6 Long-necked spearthrowers from other locations as recorded by Brandl (1973), Lewis (1998), Chaloupka (1993) and Welch (1997).	74
Figure 4.7 Three male figures with morphologically singular long-necked spearthrowers, from Site 20029.	75
Figure 4.8 Individual human figure with a long-necked spearthrower and goose-wing fan, from site 10041.	76
Figure 4.9 Group of three male figures, from site 10039.	76
Figure 4.10 Human-like figure with near-horizontal legs launching a spear with a rectilinear long-necked spearthrower, from site 30116.	77
Figure 4.11 Group of eight stick-figures holding two types of spearthrowers, engaged in choreographed movement, from site 10040.	78
Figure 4.12 Human-like figures with a dog-like animal and items of material culture, from site 10041.	79
Figure 4.13 Two broad spearthrowers.	80
Figure 4.14 Painting of a concave-sided long-necked spearthrower, from site R10018.	81
Figure 5.1 Madjedbebe, aerial view, 2012. The rock art can be found at the very base of the rock face.	88
Figure 5.2 View of Madjedbebe showing the height of the rock face and some key painted panels at its lower levels, 2012.	89
Figure 5.3 Distribution of key rock art and other archaeological sites mentioned in this chapter.	90
Figure 5.4 Toby Gangali in 1985.	93
Figure 5.5 View of some of the painted panels at Madjedbebe, 2012.	95

Figure 5.6 View of some of the painted panels at Madjedbebe, 2012.	95
Figure 5.7 Depiction of bundled human bones at Madjedbebe, 2013.	97
Figure 5.8 Painted hand and forearm stencil from Madjedbebe. The hand was first stencilled, then outlined and infilled.	98
Figure 5.9 Painting of a firearm from Madjedbebe, one of 16 depicted at the site. This example is shown hanging upside down as though on the side of a horse or across the shoulder of the carrier.	99
Figure 5.10 European-contact painting featuring a person wearing European-style clothing, smoking a pipe and with oversized gun depicted above head.	99
Figure 5.11 Example of an X-ray fish painting from Madjedbebe.	101
Figure 6.1 Dynamic Figures scene from Mirarr Country.	109
Figure 6.2 Examples of Chaloupka's four phases of Dynamic Figures from Jabiluka, from left to right representing the oldest to youngest phases.	114
Figure 6.3 Dynamic Figure from Chaloupka's Site 124, described as a later Dynamic Figure but not showing any evidence of dotting and with characteristics more consistent with his earlier phases.	115
Figure 6.4 Map of the Djawumbu-Madjawarna Massif.	115
Figure 6.5 The second-largest scene of the Jabiluka Dynamic Figures, depicting what appears to be a similar cultural activity as evident in the largest scene.	118
Figure 6.6 The large central Dynamic Figure is depicted in the Phase 1 style running with spears across its body; other Dynamic Figures are below and above it running yet depicted in Phase 3 style, while the Dynamic Figure to the right has Phase 2 muscular arms.	119
Figure 6.7 Two scenes of Dynamic Figures.	120
Figure 6.8 Two examples of Dynamic Figures with material culture objects constructed of dots.	121
Figure 6.9 A long-arm Dynamic Figure from Mirarr Country.	123
Figure 7.1 Plan of Red Lily Lagoon Site 3, Area D.	131
Figure 7.2 Red Lily Lagoon Site 3, Area D Panel 2, highlighting the sequence of rock paintings.	131
Figure 7.3 Early X-ray attributes, some of which are depicted in Motif 3.	132
Figure 7.4 Panel 2 showing sample locations for radiocarbon age determinations.	135
Figure 7.5 Location of samples collected for radiocarbon dating.	135
Figure 8.1 The painting of the megafauna species <i>Palorchestes</i> that displays two prominent tufts of chest hair and is accompanied by a smaller (younger?) version of the same animal.	147
Figure 8.2 This painting depicts a predatory quadruped with a distinctively developed head and muzzle region unlike a thylacine. It is suggested that the robust proportions of the head represent a morphology similar to that of the marsupial lion <i>Thylacoleo carnifex</i> .	149

Figure 8.3 Top: An image of the large, short-faced kangaroo painted in life-like proportions in Kakadu National Park. Bottom: Enhanced image using DStretch. Note the large claw, thick tail and short face of the animal. The large flightless bird mentioned in the text is also plainly visible.	150
Figure 8.4 The thick tail structure of the kangaroo painted in Figure 8.3, which is unlike the tail of any modern animal and suggests the proportions required to balance the body of a large megafauna macropod.	150
Figure 8.5 A close-up of the prominent single claw that is a distinct feature of the largest of short-faced kangaroo <i>Procoptodon goliah</i> .	151
Figure 8.6 The distinct head region of the kangaroo in Figure 8.3 showing the rounded, shortened face structure and long hair on the ears.	151
Figure 8.7 A large kangaroo that is a possible representation of <i>Protemnodon</i> (?), painted in the Wellington Range northeast of the Kakadu painting.	153
Figure 8.8 This animal has a longer face than the Kakadu kangaroo, and other features that might represent one of the long-faced extinct varieties, such as <i>Protemnodon</i> of which there were three species, all believed to exist until after humans arrived (Table 8.1; see also Figure 8.3). Scale 10 cm.	154
Figure 8.9 The tail is very broad, up to 20 cm wide, and much broader than any extant kangaroo. Scale 10 cm.	154
Figure 8.10 A close up of the feet of the large kangaroo (<i>Protemnodon</i> ?). These feet are quite different from those of the image depicted in Figure 8.5. They are much broader, shorter and show a distinct paw-like morphology absent from the animal in Figure 8.5. Scale 10 cm.	154
Figure 8.11 The front feet are shown with huge pointed claws. Scale 10 cm.	154
Figure 8.12 The unidentified ‘flightless’ bird that underlies the large short-faced kangaroo.	155
Figure 9.1 Location of Jawoyn lands.	166
Figure 9.2 Distribution of rock art sites with European-contact motifs.	167
Figure 9.3 Boat A, site ARN-088/6. Scale 10 cm.	168
Figure 9.4 Boats B–D, site ARN-088/6.	168
Figure 9.5 Boat E, site ARN-088/6. Scale 10 cm.	169
Figure 9.6 Overlapping boat motifs, site ARN-088/6. Scale 10 cm.	169
Figure 9.7 Art panel with European figure, site ARN-107/3. Insert is a photo-tracing of the central figure. Scale 10 cm.	171
Figure 9.8 European figure with floppy hat and carrying a long object (rifle?), site ARN-019/M.	172
Figure 9.9 Horse painting, site ARN-074/A.	173
Figure 9.10 Panel with horse painting showing complex of superimpositions, site ARN-074/A. Head (at far right) and tail (at far left) of horse motif indicated. Scale 10 cm.	173
Figure 9.11 Site ARN-087/1 showing location of the horse-and-rider painting marked with yellow arrow.	174

Figure 9.12 Horse-and-rider painting at site ARN-087/1.	174
Figure 9.13 X-ray fish (barramundi and saratoga) painted with colours similar to those used on the axe painting, site ARN-082/1 (Dalakngalarr 1). Scale 10 cm.	175
Figure 9.14 Bullock with bell panel, site ARN-031/1.	176
Figure 9.15 Panel of Bullock with bell, site ARN-031/1. Scale 10 cm.	176
Figure 9.16 A: SEM-EDX (in secondary electron mode, 15 kV) micrograph of pigment sample from the 'Jawoyn Lady'. B: SEM-EDX (in secondary electron mode, 15 kV) micrograph of pigment sample from the spotted fish. C: FTIR spectra focused on the 3300–3900 cm ⁻¹ region. D: X-ray fluorescence spectrum from the spotted fish sample.	178
Figure 9.17 Early European travels on and around the Arnhem Land plateau. Leichhardt, Stuart, McKinlay and Lindsay's routes are plotted from maps and textual details in the explorers' published journals.	180
Figure 9.18 Suitcase frame elements from the European-contact period found as surface artefacts at site ARN-129/3.	182
Figure 9.19 Cat's-eye marble from the European-contact period found as a surface artefact at site ARN-091/20a.	183
Figure 9.20 Small metal billy-can from the European-contact period found as a surface artefact at site ARN-116/1.	184
Figure 9.21 Non-European wooden artefact cut with a metal blade, site ARN-107/12. Scale 10 cm.	184
Figure 9.22 Non-European wooden spear point cut with metal blade, site ARN-133/29.	185
Figure 9.23 Non-European bag made from plant fibre, site ARN-110/1. Identified by Margaret Katherine (pers. comm. to Ray Whear 2009) as a bag for washing yams. AMS radiocarbon date Wk-31833 was obtained from a fragment of fibre from this bag.	185
Figure 9.24 Non-European cache of cord and wooden artefacts, site EVA-12/4. Scale 10 cm.	185
Figure 9.25 Non-European artefacts made of wood. A: Barbed spear point with radiocarbon date Wk-28114, site ARN-074/A. B: Spearthrower with radiocarbon date Wk-28113, site ARN-074/A. C: Point with adhering resin with radiocarbon date Wk-31834, site ARN-087/1. D: Barbed spear point with radiocarbon dates Wk-28115 and Wk-31835, site ARN-074/A.	186
Figure 9.26 Distribution of European-contact period and organic artefacts in Jawoyn lands.	189
Figure 9.27 Proposed chronological sequence of introduced fauna (horse, cattle) motifs in Jawoyn lands. A: Early. B: Intermediate. C: Late.	191
Figure 10.1 Location of Nawarla Gabarnmang on the Arnhem Land plateau.	198
Figure 10.2 Aerial photograph of Nawarla Gabarnmang and surrounding features, looking south.	198
Figure 10.3 Location of rock art panels, with all features mapped on the ceiling.	199
Figure 10.4 South wall of Squares F+I+L+M, showing sharp and thin interfaces between stratigraphic units in the excavations in progress.	200

Figure 10.5 Flat rock slab originating from the ceiling, lying horizontally in Square E.	200
Figure 10.6 The sheltered pillarscape, with senior Jawoyn Elder and Traditional Owner Margaret Katherine.	200
Figure 10.7 Location of Nawarla Gabarnmang, showing expanses of outcropping rock (orange) and the headwaters of river systems amidst the high basins of the central Arnhem Land plateau.	202
Figure 10.8 Rockshelter landscape of the western Arnhem Land plateau, Jawoyn Country.	202
Figure 10.9 Environmental context.	204
Figure 10.10 The low-lying ‘courtyard’ between Nawarla Gabarnmang and the edge of the rock outcrop to the south.	205
Figure 10.11 Views of Nawarla Gabarnmang from southern (top) and northern (bottom) entrances, as generated from the laser 3-D model.	205
Figure 10.12 South–north transect across the open, central-eastern sector of the site, showing Squares C+G+K+N, E+J, and F+I+L+M to their base.	206
Figure 10.13 Geomorphological map of the ceiling. The zone between the dashed lines delimits the archaeological site studied in this chapter.	207
Figure 10.14 Rock strata making up the bedrock on the ground, pillar and ceiling levels.	207
Figure 10.15 Results of XRF core scanner analysis of individual rock strata.	208
Figure 10.16 Transect across Nawarla Gabarnmang, relative to the basin to the north and the courtyard to the south.	210
Figure 10.17 Northern edge of the rock outcrop that delimits the southern side of the courtyard, to the south of the site.	211
Figure 10.18 Different stages in the natural, geological evolution of the pillarscape along the edge of the rock outcrop that delimits the southern side of the courtyard.	211
Figure 10.19 Different stages in the natural, geological evolution of the pillarscape along the edge of the rock outcrop that delimits the southern side of the courtyard, from thin fissure lines (1), to the weathering of the matrix surrounding the fissures (phantomisation), to the erosion of weathered products leading to the formation of remnant rock (pillars) separated by voids (2–5).	212
Figure 10.20 Stages in the process of phantomisation and creation of pillarscapes on the Arnhem Land plateau.	213
Figure 10.21 Nawarla Gabarnmang.	215
Figure 10.22 Plan of site floor, based on details recorded during on-site archaeomorphological mapping and the 3-D laser model.	220
Figure 10.23 Nawarla Gabarnmang present ceiling, showing also remnant traces of missing pillars.	223
Figure 10.24 Southwestern sector, showing two remnant traces of missing pillars on the ceiling.	224
Figure 10.25 Archaeomorphological mapping of southwestern sector of Nawarla Gabarnmang.	225

Figure 10.26 Alcove A of the southwestern sector, showing the horizontal and vertical relationships of features discussed in text.	226
Figure 10.27 North–south transect across Alcove A in the southwestern sector.	228
Figure 10.28 North–south transect across Alcove B, southwestern sector, as based on the laser 3-D model. This alcove retains elements of a partially dismantled pillar (including the ‘pillar base’).	230
Figure 10.29 Photograph and reconstruction of sequence of events in Alcove B, southwestern sector.	231
Figure 10.30 Strewn rocks on and near a remnant pillar base in Alcove B.	232
Figure 10.31 Transition zone between Alcoves A and B, and the darker, more close-knit pillar space immediately to the north, showing a toppled pillar on the floor in the mid-ground.	233
Figure 10.32 Partially removed pillar, with upper parts missing, southwestern sector.	233
Figure 10.33 Two ways of removing the upper level of pillars prior to toppling, southwest sector of site.	234
Figure 10.34 Alcove B in southwest sector, showing standing lower sections of pillars with upper sections missing (from laser 3-D model).	234
Figure 10.35 Area of contiguous Squares F+I+L+M, northwest sector, showing the stratigraphy along the south wall of the excavation against Pillar 20.	236
Figure 10.36 Area of contiguous Squares F+I+L+M in the 3-D model, northwest sector, showing the natural accumulation of fallen rocks on the ground prior to human arrival (B, C) followed by a more elevated floor caused by the accumulation of aeolian sands and removal of pillar during the period following the first arrival of people (D).	238
Figure 10.37 Heavily weathered cupules on the western side of Pillar 28.	240
Figure 10.38 Dynamic Figure carrying boomerangs, Nawarla Gabarnmang.	240
Figure 10.39 The collapsed rockshelter that once formed the entry way into the courtyard from the southwest of the extant Nawarla Gabarnmang.	241
Figure 11.1 Detail of the vast rockshelter landscape of the central-western Arnhem Land plateau.	246
Figure 11.2 Nawarla Gabarnmang, northern entrance.	246
Figure 11.3 Inside Nawarla Gabarnmang, showing pillared site structure.	247
Figure 11.4 Map of ceiling of Nawarla Gabarnmang, showing location of Panel E1 relative to other ceiling art panels and excavation squares.	248
Figure 11.5 Location of Panel E1 within the centre-eastern ceiling.	248
Figure 11.6 Panel E1.	249
