4 Upper Mangrove Creek catchment: random sampling units.

Fieldwork results and evidence from the archaeological deposits

| Summary of fieldwork results         | 77 |
| Archaeological deposits              | 78 |
| The rockshelters                     | 83 |
| The open deposits                    | 83 |
| Area of archaeological deposits      | 83 |
| Depth of archaeological deposits     | 86 |
Contents of archaeological deposits 86
Stone artefacts 92
Faunal remains 92
Categorisation of archaeological deposits 94
Isolated finds 96
Potential habitation shelters and potential archaeological deposits 96

5 Upper Mangrove Creek catchment: random sampling units.
Possible biases in the archaeological record and data sets 99
Methodological factors — fieldwork 99
Definitions 99
Survey design 100
Sample size 101
Excavation stopped prematurely 101
Observer bias 101
Survey results 102
Excavation results 102
Methodological factors — analyses 103
Calculating artefact accumulation rates 103
Natural processes 103
Visibility 104
Archaeological deposits in rockshelters 104
Open archaeological deposits 104
Grinding areas and engraved images 105
Destruction 105
Archaeological deposits in rockshelters 106
Open archaeological deposits 108
Further comments on visibility 109
Incorporation of older charcoal 110

Changes in the rate of artefact accumulation in each topographic zone in successive time periods 142
Phased sequence 142
Millennial sequence 142
Discussion 144
Typological phases versus millennial divisions 144
Artefact accumulation rates in individual habitations 146
Inter-zonal variability within the catchment 146
Variations over time in the millennial growth rates 147
Relationship between the timing of the quantitative changes and the appearance of qualitative changes in the stone artefact assemblages 147
Concluding comments 148

7 Quantitative changes in other regions of eastern Australia: a review 151
Changes in the habitation indices 156
Changes in the rate of habitation establishment 158
Changes in the number of habitations used 158
Changes in the rate of known-habitation use 164
Changes in the growth rates for habitation indices 164
Habitation establishment rates 165
Number of habitations used 166
Rate of known-habitation use 168
Changes in the artefact accumulation rates 168
Dramatic decreases in artefact accumulation rates 173
Dramatic increases in artefact accumulation rates 173
Average annual growth rates for the artefact accumulation rates 176
Relationships between the habitation indices and the artefact accumulation rates: directions and timing 177
Direction of trends 180
8 A re-examination of interpretations and explanations for changes in habitation and artefact indices in eastern Australia

- Population-change explanations
  - Assumptions underlying the population-change explanations
  - Implications of population-change premises
  - Growth rates
  - Population-change conclusions

- Behavioural change: qualitative changes in stone artefact assemblages
  - Increases in the artefact accumulation rates in the last 5000 or 4000 years BP
  - Introduction of Bondaian assemblages/'Small Tool Tradition'
  - Transition from Middle to Late Bondaian (Bondaian to Post-Bondaian)
  - Conclusion relating to increases in the artefact accumulation rate
  - Decreases in the artefact accumulation rates in the last 1000 years
  - Typological change
  - Technological change
  - Raw material change
  - Conclusions concerning qualitative changes in the stone artefact assemblages

- Conclusions and post-1980s studies

9 Climatic and environmental change in eastern Australia during the late Pleistocene and Holocene

- Climate change
  - Late Pleistocene
  - The Holocene
  - Palaeoenvironmental evidence from the Upper Mangrove Creek catchment
- Changes in sea-level
- Changes to country
- Coastal productivity and resource availability
- The effect of sea-level change on occupation of the Upper Mangrove Creek catchment
- The land
- Availability of resources
- Conclusions: correlations between climate and environmental changes and catchment trends in habitation and artefact indices

10 From numbers of sites and artefacts to habitation, subsistence and land-use patterns

- Habitation patterns and subsistence organisation
  - Base camps, transit camps and activity locations
  - Identifying base camps, activity locations/transit camps
  - Mobility — residential or logistical?
  - Other measures of mobility patterns
  - Bipolar technology
- Subsistence methods and equipment
- Risk minimisation strategies
Appendices

Appendix 1
Upper Mangrove Creek catchment — random sampling units. Distribution of Artefact Types and Raw Materials in each Archaeological Deposit

Appendix 2
Upper Mangrove Creek catchment — random sampling units. Number of Artefacts in Each Millennium and Estimated Total Number of Artefacts Accumulated in each Archaeological Deposit

Appendix 3
Upper Mangrove Creek catchment — random sampling units.
Part 1. Upper Mangrove Creek catchment. Native animal taxa identified in faunal assemblages from the archaeological deposits.

Appendix 4
Review of quantitative changes in other regions of eastern Australia: case studies.
A. Habitation indices:
   NSW south coast and Sydney
   South-western Victoria
   Central Queensland highlands
   South-eastern Queensland
   NSW–ACT–Victoria: southern uplands-tablelands
   The Mallee, north-western Victoria
   NSW Hunter Valley
B. Artefact accumulation rates in individual habitations
   NSW south coast and Sydney
   NSW Hunter Valley and adjacent regions
List of Figures

1.1 Location of Upper Mangrove Creek catchment, NSW central coast. 3
1.2 Forested land in valley bottom, looking north along Wattle Creek. Easter 1980. 7
1.3 Lower slopes of forested ridgeside with Black Hands Shelter in large boulder in middle distance. Easter 1978.
1.4 Periphery ridgetop on eastern side of catchment with Sunny Shelter. August 1982.
3.1 Loggers: shelter with archaeological deposit dating back to ca 11,000 BP. June 1980.
3.2 Emu Tracks 2: shelter with archaeological deposit. February 1980.
3.3 Grinding grooves in headwater tributary of Bucketty Gully. Grooves are at bottom left extending beside deepest part of channel in the sandstone bedrock where water generally flows. June 1981.
3.4 Black Hands open archaeological deposit. Cleared river flat and colluvial slope adjacent to Mangrove Creek, which is marked by the line of wattle trees behind the tents. January 1978.
3.6 Charcoal images, including emu and other birds, macropod, people (male and female) and snakes (including death adders?) in Boat Cave. 1978.
3.7 Hand stencils, including one with forearm, and black infilled kangaroo head in Black Hands Shelter. August 1978.
3.10 Ground area adjacent to grinding groove in White Figure Shelter. August 1982.
3.11 Scarred tree: one of a series of footsteps made with a metal axe up the tree trunk. The tree was dead when found by loggers adjacent to Mangrove Creek below its junction with Boomerang Creek. October 1979.
3.12 Distance criteria applied in defining sites. 48
3.13 Upper Mangrove Creek catchment: schematic cross-section of catchment showing topographic zones.
3.14 Upper Mangrove Creek catchment: topographic zones.
3.15 Upper Mangrove Creek catchment: location of random sampling units.
3.16 Ground-edged artefacts from Kangaroo and Echidna (test pit 2, spit 3): two hatchet heads (top and bottom) and Bulga knife (centre).
3.17 Hafted retouched flake from Loggers Shelter found in lower ceileding area at rear of shelter (square Lb, spit 1).
3.18 Fragment of red ochred sandstone palette from Sunny Shelter (test pit, spit 6).
3.19 Bone artefacts from Loggers Shelters (top: Square Lb, spit 1; and three at right: surface at rear of shelter, square A, spit 3-brown, and square Bk, spit 1) and Bird Tracks (three at left: from test pit, spit 3).
3.20 Fragment of a possible firestick (base) found on raised section of sandstone floor in Button Shelter.
3.21 Early Holocene backed artefacts from Mussel (a: square B, spit 20; b: square A, spit 23) and Loggers Shelters (c: square F, spit 7; d: square F, spit 9).

4.1 Upper Mangrove Creek catchment: archaeological sites recorded in the random sampling units.

4.2 Upper Mangrove Creek catchment: random sampling units. Percentage frequency and density of archaeological traits in each topographic zone.

4.3 Upper Mangrove Creek catchment: random sampling units. (A) Estimated total number and (B) density of artefacts accumulated in each topographic zone.

5.1 Upper Mangrove Creek catchment: percentage frequency of each type of (A) archaeological trait and (B) location in the random sampling units (RSUs) compared with the storage area (SA) and the total catchment (UMCC).

6.1 Upper Mangrove Creek catchment: random sampling units. Rate of habitation establishment in each (A) phase and (B) millennium.

6.2 Upper Mangrove Creek catchment: random sampling units. Number of habitations used in each (A) phase and (B) millennium.

6.3 Upper Mangrove Creek catchment: random sampling units. Distribution of habitations used in each phase.

6.4 Upper Mangrove Creek catchment: random sampling units. Distribution of habitations used in each millennium.

6.5 Upper Mangrove Creek catchment: random sampling units. Rate of artefact accumulation in each phase in individual archaeological deposits. Time is represented to scale, but frequency is schematic only.

6.6 Upper Mangrove Creek catchment: random sampling units. Rate of artefact accumulation in each millennium in individual archaeological deposits. Time is represented to scale, but frequency is schematic only.

6.7 Upper Mangrove Creek catchment: random sampling units. Local rate of artefact accumulation in each (A) phase and (B) each millennium.

7.1 Regions reviewed in eastern Australia.

7.2 Sites reviewed in eastern Australia.

7.3 NSW south coast and Sydney: (A) Rate of habitation establishment in each millennium. (B) Number of habitations used in each millennium.

7.4 South-western Victoria: number of habitations established in each millennium. (A) Redrawn from Lourandos 1983: 86, Fig. 3: basal radiocarbon dates from a sample of 19 archaeological sites. (B) Redrawn from Williams 1988: Fig. 10.1: basal radiocarbon dates from a sample of 25 archaeological sites.

7.5 Central Queensland highlands: (A) Rate of habitation establishment in each millennium. (B) Number of habitations used in each millennium.

7.6 South-eastern Queensland: (A) Rate of habitation establishment in each millennium. (B) Number of habitations used in each millennium.

7.7 NSW–ACT–Victorian southern uplands-tablelands: (A) Rate of habitation establishment in each millennium. (B) Number of habitations used in each millennium.

7.8 The Mallee, north-western Victoria: rate of known-habitation use in each millennium based on radiometrically dated sites, which were assigned to a millennium on the basis of calibrated radiocarbon dates and TL dates.

7.9 NSW Hunter Valley: number of habitations known to be used. (A) Mount Arthur North and South, Muswellbrook. (B) central lowlands (Singleton area).

7.10 NSW south coast: (A) Burrill Lake, (B) Curramong 1, (C) Curramong 2, (D) Sassafras and (E) Bass Point. Redrawn from Hughes and Lampert 1982, Figs 1 to 5.
7.11 Sandy Hollow, NSW Hunter Valley: rates of artefact accumulation (number per millennium).
7.12 Milbrodale, NSW Hunter Valley: rates of artefact accumulation (number per millennium).
7.13 Bobadeen, Ulan, upper Goulburn River, NSW: rates of artefact accumulation (number per millennium).
7.14 Big L, NSW Hunter Valley (southern rim): rates of artefact accumulation (number per millennium).
7.15 Yango Creek, NSW Hunter Valley (southern rim): rates of artefact accumulation (number per millennium).
7.16 Macdonald River, NSW: rates of artefact accumulation (number per millennium).
7.17 Springwood Creek, NSW Blue Mountains: rates of artefact accumulation (number per millennium).
7.18 Kings Tableland, NSW Blue Mountains: rates of artefact accumulation (number per millennium).
7.19 Walls Cave, NSW Blue Mountains: rates of artefact accumulation (number per millennium).
7.20 Capertee 3 (Square Q13), Capertee Valley, NSW: density of artefacts in each level (number per kilo of deposit). Redrawn from Johnson 1979: Fig. 35.
7.21 Shaws Creek K1, NSW: density of artefacts in each level (number per cubic metre).
7.22 Shaws Creek K2 (Square A), NSW: density of artefacts in each level (number per cubic metre).
7.23 Devon Downs, lower Murray Valley, South Australia: rates of artefact accumulation (number per millennium).
7.24 Native Well 1, central Queensland highlands: rates of artefact accumulation (number per millennium).
7.25 Native Well 2, central Queensland highlands: rates of artefact accumulation (number per millennium).
7.26 Kenniff Cave, central Queensland highlands: rates of artefact accumulation (number per millennium).
7.27 The Tombs, central Queensland highlands: rates of artefact accumulation (number per millennium).
7.28 Maidenwell, south-eastern Queensland: rates of artefact accumulation (number per millennium).
7.29 Gatton, south-eastern Queensland: rates of artefact accumulation (number per millennium).
7.30 Habitations in eastern Australia: summary of changes in the rates of artefact accumulation and changes in growth rates in the artefact accumulation rates.
9.1 Upper Mangrove Creek catchment: comparison between timing of changes in habitation and artefact indices and general climatic shifts and sea-level rise in south-eastern Australia.
10.1 Upper Mangrove Creek catchment: number of base camps and activity locations/transit camps used in each millennium.
10.2 Upper Mangrove Creek catchment: number and percentage frequency of ground implements and ground fragments in each millennium.
10.3 Upper Mangrove Creek catchment: number and percentage frequency of igneous artefacts in each millennium.
10.4 Upper Mangrove Creek catchment: number and percentage frequency of bipolar artefacts in each millennium.

10.5 Upper Mangrove Creek catchment: number and percentage frequency of quartz artefacts in each millennium.

10.6 Upper Mangrove Creek catchment: number and percentage frequency of backed artefacts in each millennium.

Figure: Appendix 2
A3–3/1 Loggers Shelter: distribution of bone and shell according to square and depth. Bone weights are adjusted to a standard volume (10cm spit) and are, therefore, relative density values.

Figure: Appendix 4
A4/1 Native Well 1, central Queensland highlands: rates of implement accumulation. Redrawn from Morwood 1981: Fig. 23.

List of Tables

3.1 Upper Mangrove Creek catchment: terminology and abbreviations used for archaeological evidence.
3.2 Upper Mangrove Creek catchment: description of topographic zones into which catchment was stratified for sampling purposes.
3.3 Upper Mangrove Creek catchment: details of stratified random sample.
3.4 Upper Mangrove Creek catchment: details of excavations in sites with archaeological deposit and potential archaeological deposit, and potential habitation shelters with potential archaeological deposit. Figures rounded to nearest 0.5cm.
3.5 Upper Mangrove Creek catchment: locations and types of deposit excavated.
3.6 Upper Mangrove Creek catchment: cultural phases and duration based on typological and raw-material changes in stone artefact assemblages.
3.7 Upper Mangrove Creek catchment: sequence of typological phases and dating, and correlation with terminology of other researchers.
3.8 Upper Mangrove Creek catchment: diagnostic criteria used as basis for dating typological phases.
4.1 Upper Mangrove Creek catchment: archaeological sites in random sampling units.
4.2 Upper Mangrove Creek catchment: (A) site locations, (B) archaeological deposits and (C) potential habitation shelters in random sampling units. Number, percentage frequency and density in each topographic zone (density is number/sq km).
4.3 Upper Mangrove Creek catchment: dimensions and aspects of rockshelters with archaeological deposit.
4.4 Upper Mangrove Creek catchment: random sampling units. Archaeological deposits in rockshelters: area (m$^2$), status and depth of archaeological deposits.
4.5 Upper Mangrove Creek catchment: random sampling units. Open archaeological deposits: area (m$^2$) over which artefacts were exposed and depth of archaeological deposits.
4.6 Upper Mangrove Creek catchment: random sampling units. Contents recorded in/retrieved from the archaeological deposits.

4.7 Upper Mangrove Creek catchment: random sampling units. Artefact types retrieved from archaeological deposits, including artefacts excavated and collected from surface of deposit outside test pits.

4.8 Upper Mangrove Creek catchment: random sampling units. Mammal remains retrieved from archaeological deposits: number of fragments.

4.9 Upper Mangrove Creek catchment: random sampling units. Non-mammal vertebrate remains retrieved from archaeological deposits: number of fragments.

4.10 Upper Mangrove Creek catchment: random sampling units. Invertebrate faunal remains retrieved from archaeological deposits: number of fragments.

4.11 Upper Mangrove Creek catchment: random sampling units. Summary of total numbers and weights (g) of all faunal remains retrieved from archaeological deposits.

4.12 Upper Mangrove Creek catchment: random sampling units. Archaeological deposits: number of artefacts retrieved, number of artefacts/square metre, and estimated total number of artefacts present.

4.13 Upper Mangrove Creek catchment: assemblages grouped according to K-means analysis.

5.1 Upper Mangrove Creek catchment: random sampling units. Archaeological deposits in rockshelters and geomorphological processes.

6.1 Upper Mangrove Creek catchment: random sampling units. Radiocarbon dates, all from full-sized charcoal samples, calibrated using Radiocarbon Calibration Program Rev 4.3 (Stuiver and Reimer 1993b; Stuiver et al. 1998) and rounded to nearest five years.

6.2 Upper Mangrove Creek catchment: random sampling units. Archaeological deposits: estimated period of habitation establishment.

6.3 Upper Mangrove Creek catchment: random sampling units. Number of habitations established, rate of habitation establishment and number of habitations used (A) in each phase and (B) millennium.

6.4 Upper Mangrove Creek catchment: random sampling units. Radiocarbon-dated archaeological deposits only: number of habitations established, rate of habitation establishment, and number of habitations used (A) in each phase and (B) each millennium.

6.5 Upper Mangrove Creek catchment: random sampling units. Phased sequence: growth rates for rates of habitation establishment, numbers of habitations used and local rates of artefact accumulation, based on Table 6.3A.

6.6 Upper Mangrove Creek catchment: random sampling units. Millennial sequence: growth rates for rates of habitation establishment, numbers of habitations used and local rates of artefact accumulation, plus average annual growth rates for local rates of artefact accumulation, based on Table 6.3B.

6.7 Upper Mangrove Creek catchment: random sampling units. Number of habitations established in each topographic zone in each phase.

6.8 Upper Mangrove Creek catchment: random sampling units. Number of habitations established, also equals rate of habitation establishment in each topographic zone in each millennium.

6.9 Upper Mangrove Creek catchment: random sampling units. Number of habitations used in each topographic zone in each phase.
6.10 Upper Mangrove Creek catchment: random sampling units. Number of
habitations used in each topographic zone in each millennium.

6.11 Upper Mangrove Creek catchment: random sampling units. Archaeological
deposits: estimated total number of artefacts accumulated in each phase,
rounded to nearest 50.

6.12 Upper Mangrove Creek catchment: random sampling units. Archaeological
deposits: rate of artefact accumulation in each phase (number per millennium),
rounded to nearest 50.

6.13 Upper Mangrove Creek catchment: random sampling units. Archaeological
deposits: estimated total number of artefacts accumulated in each millennium
and rate of artefact accumulation for millennial sequence, rounded to nearest 50.

6.14 Upper Mangrove Creek catchment: random sampling units. Estimated total
number of artefacts accumulated in each phase in each topographic zone,
rounded to nearest 50.

6.15 Upper Mangrove Creek catchment: random sampling units. Rate of artefact
accumulation in each phase in each topographic zone, rounded to nearest 50.

6.16 Upper Mangrove Creek catchment: random sampling units. Estimated total
number of artefacts accumulated in each millennium in each topographic zone
and rate of artefact accumulation for millennial sequence, rounded to nearest 50.

7.1 Eastern Australian regions used as comparative case studies for habitation
indices.

7.2 Eastern Australian regions and sites used in comparative case studies for
rates of artefact accumulation.

7.3 Regions in eastern Australia: summary of habitation indices.

7.4 Regions in eastern Australia. Millennial growth rates for rates of habitation
establishment.

7.5 Regions in eastern Australia. Millennial growth rates for number of
habitations used, and for NSW Hunter Valley known-habitation use.

7.6 Regions in eastern Australia. Average annual growth rates (excluding 0% p.a.
growth rates) for habitation establishment rates.

7.7 Regions in eastern Australia. Average annual growth rates (excluding 0% p.a.
growth rates) for number of habitations used, and for NSW Hunter Valley
known-habitation use.

7.8 Regions in eastern Australia. No of habitations and direction of change in
artefact accumulation rates in the most recent/upper levels of habitation
in each region.

10.1 Upper Mangrove Creek catchment: millennial assemblages grouped
according to K-means analysis.

10.2 Upper Mangrove Creek catchment: distribution of base camps (BC) and activity
locations/transit camps (AL/TC) in each topographic zone in each millennium.

10.3 Upper Mangrove Creek catchment: number and percentage frequency of
backed, ground, igneous, bipolar and quartz artefacts in each millennium.

10.4 A habitation, subsistence and land-use model for the Upper Mangrove Creek
catchment.

10.5 Upper Mangrove Creek catchment: size of common macropod species in
each period.

### Tables: Appendix 3

**A3–2/1** Summary of faunal assemblage by excavation unit for small assemblages. 314
See separate tables for Dingo, Two Moths and White Figure. Weights and counts exclude hairs and feathers listed in Table A3–2/2.

**A3–2/2** Taxonomically diagnostic faunal remains listed by site and excavation unit for small assemblages.

**A3–2/3** Dingo Shelter: summary of faunal assemblage by excavation unit.

**A3–2/4** Dingo Shelter: taxonomically diagnostic faunal remains listed by excavation unit.

**A3–2/5** Two Moths: summary of faunal assemblage by excavation unit (totals exclude feathers and hairs).

**A3–2/6** Two Moths: taxonomically diagnostic faunal remains listed by excavation unit.

**A3–2/7** White Figure: summary of faunal assemblage by excavation unit (FS = field sort; LS = laboratory sort; Total = FS + LS; see Chapter 5 this monograph).

**A3–2/8** White Figure: taxonomically diagnostic faunal remains listed by excavation unit.

**A3–3/1** Loggers, Black Hands and Geebung: total number and weight of faunal remains (from Aplin 1981: Table 1).

**A3–3/2** Loggers Shelter: bone from all squares (from Aplin 1981: Table 2).

**A3–3/3** Loggers Shelter: shell from all squares (from Aplin 1981: Table 3).

**A3–3/4** Loggers Shelter: number of identified taxon for each analytical unit in all squares and a site total (from Aplin 1981: Table 4).

**A3–3/5** Loggers Shelter: percentage composition of selected fauna (from Aplin 1981: Table 21).

**A3–3/6** Black Hands and Geebung Shelters: bone and shell (from Aplin 1981: Table 8).

**A3–3/7** Black Hands Shelter, Square F: faunal composition (from Aplin 1981: Table 10).

### Tables: Appendix 4

**A4/1** NSW south coast and Sydney: rate of habitation establishment and number of habitations used in each millennium. N = 58, see Table A4/2 for sites included.

**A4/2** NSW south coast and Sydney: sites included in Table A4/1 and Figure 7.3, with millennium in which establishment is estimated to have occurred, radiometric age, geographic location and reference.

**A4/3** South-western Victoria: number of habitations established in each millennium based on Lourandos 1983a: Table 2 and Williams 1988: Table 10.1, excluding Toolondo drainage system and Werribee burial site.

**A4/4** South-western Victoria: sites included in Table A4/3 and Figure 7.4, with basal radiocarbon ages from Lourandos 1983a: Table 2, N = 19; Williams 1988: Table 10.1, N = 25.

**A4/5** Central Queensland highlands: rate of habitation establishment and number of habitations used in each millennium. N = 11, see Table A4/6 for sites included.

**A4/6** Central Queensland highlands: sites included in Table 45 and Figure 7.5, with radiocarbon ages from Morwood 1984: Table 6.2.

**A4/7** South-eastern Queensland: rate of habitation establishment and number of habitations used in each millennium from Morwood 1987: Fig 4. N = 23, see Table A4/8 for sites included.

**A4/8** South-eastern Queensland: sites included in Table A4/7 and Figure 7.6, with radiocarbon and estimated ages from Morwood 1987: Fig. 4. Except where noted, dated samples were charcoal.

**A4/9** NSW–ACT–Victorian southern uplands-tablelands: rate of habitation establishment and number of habitations used in each millennium. Rockshelter deposits N = 14, open deposits N = 11; see Table A4/10 for sites included.
A4/10 NSW–ACT–Victorian southern uplands-tablelands: sites included in Table A4/9 and Figure 7.7, with radiocarbon and estimated ages for rockshelters and time of known use for open archaeological deposits, and references.

A4/11 The Mallee, north-western Victoria: sites included in Figure 7.8 with radiometric ages from Ross 1984: 178–80.

A4/14 NSW Hunter Valley (central lowlands — Mt Arthur North and South): number of habitations known to be used and rates of known-habitation use in each phase. Hiscock’s 1986 open archaeological deposits, N = 15.

A4/15 NSW Hunter Valley (central lowlands — Singleton area): sites included in Table A4/16 and Figure 7.9B with radiometric ages and references. All radiocarbon ages are from charcoal samples, except where TL noted after laboratory number.

A4/16 NSW Hunter Valley (central lowlands — Singleton area): rates of known-habitation use in each century/millennium. N = 12, see Table A4/15 for sites included.

A4/17 Burrill Lake, NSW south coast: rates of implement accumulation and average annual growth rates based on data from Hughes 1977: Table 2.13.

A4/18 Currarong 1, NSW south coast: rates of implement accumulation and average annual growth rates based on data from Hughes 1977: Table 3.10.

A4/19 Currarong 2, NSW south coast: rates of implement accumulation and average annual growth rates based on data from Hughes 1977: Table 3.11.

A4/20 Bass Point, NSW south coast: rates of implement accumulation and average annual growth rates based on data from Hughes 1977: Table 5.6.

A4/21 Sassafras 1, NSW south coast hinterland: rates of implement accumulation and average annual growth rates based on data from Hughes 1977: Table 4.3.

A4/22 Sandy Hollow, NSW Hunter Valley (Goulburn River): rates of artefact accumulation and average annual growth rates based on data from Moore 1970: 35–7, Table 2.

A4/26 Yango Creek, NSW Hunter Valley (southern rim): rates of artefact accumulation and average annual growth rates based on data from Moore 1981: 398–401, Table 4.

A4/27 Macdonald River (Squares A–AA–BB–CC), NSW: rates of artefact accumulation and average annual growth rates based on data from Moore 1981: 401–15, Table 5 and Fig. 4.

A4/28 Springwood Creek, NSW Blue Mountains: rates of artefact accumulation and average annual growth rates based on data taken from Stockton and Holland 1974: Table 3 and Appendix, and revised radiocarbon ages from Stockton 1993: 38–9.

A4/30 Walls Cave (Site B), NSW Blue Mountains: rates of artefact accumulation and average annual growth rates based on depth/age curve for Levels 1 to 3 assuming constant rate of sediment accumulation using data from Stockton and Holland 1974: Table 3 and Appendix.

A4/31 Shaws Creek K1, NSW: Number and density of artefacts in each level based on data from Stockton 1973 and Johnson 1979: Tables 2 and 4. B indicates levels with backed artefacts.

A4/34 Devon Downs (Trench C), lower Murray Valley, South Australia: rates of artefact accumulation and average annual growth rates based on data from Smith 1982.

A4/35 Fromms Landing 2, lower Murray Valley, South Australia: number of artefacts in each level, radiocarbon dates and approximate length of pit, based on data from Mulvaney 1960: 65, 70, Table 1, Fig. 3; Mulvaney et al. 1964: Table 3; Roberts and Pate 1999: Table 1.

A4/36 Fromms Landing 6, lower Murray Valley, South Australia: rates of artefact accumulation and average annual growth rates based on data from Mulvaney et al. 1964: 490, Table 1.

A4/37 Native Well 1, central Queensland highlands: rates of implement accumulation, rates of artefact accumulation and average annual growth rates based on data from Morwood 1979 and Morwood 1981: Figure 23 and Table 11.

A4/39 Kenniff Cave, central Queensland highlands: rates of artefact accumulation and average annual growth rates based on data from Mulvaney and Joyce 1965: Tables 2 and 3; Mulvaney 1975: 155, 288.

A4/40 The Tombs (shelter), central Queensland highlands: rates of artefact accumulation and average annual growth rates, based on data from Mulvaney and Joyce 1965: Table 5, shelter excavation.

A4/41 Maidenwell, south-eastern Queensland: rates of artefact accumulation and average annual growth rates based on data from Morwood 1986: 92–3, Table 1.

A4/42 Gatton, south-eastern Queensland: rates of artefact accumulation and average annual growth rates based on data from Morwood 1986: 104–7, Table 5.
