Most reference lists in published papers aim to cover the most recent literature. This list also aims to bring out the origins of our knowledge in the older literature. To make the best advantage of this list, use the ‘Find’ capability on your computer to search for authors whose name is not first in the reference and to search for topics indicated by the titles. This list is a beginning only. It is advisable to search also on the Internet and on the search engines of the most appropriate journals, using the topic, name and initials to find the recent bibliography of these authors.

Arvanitaki, A. 1937–61 [see list of recordings from molluscs in Bullock and Horridge (1965:1372)].

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Bethe, A. 1898, ‘Dürfen wir den Ameisen und Bienen psychische Qualitäten zuschreiben?’, *Archiv für gesampte Physiologie*, vol. 70, pp. 15–100.

Crozier, W. J. 1928–37 [numerous papers with colleagues in the *Journal of General Physiology*].

Egelhaaf, M. 1985, ‘On the neuronal basis of figure-ground discrimination by relative movement in the visual system of the fly. II. Figure-detection cells: a new class of visual interneurons’, *Biological Cybernetics*, vol. 52, pp. 195–209.

Fabre, J. H. 1879 [the experiments on navigation are published in the volume of *Souvenirs Entomologiques* for 1879].

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Horridge, G. A. 1997a, ‘Pattern discrimination by the honeybee, disruption as a

Horridge, G. A. 1997b, ‘Vision of the honeybee *Apis mellifera* for patterns with
 one pair of equal orthogonal bars’, *Journal of Insect Physiology*, vol. 43,
 pp. 741–8.

Horridge, G. A. 1997c, ‘Spatial and non-spatial coding of patterns by the honey-
 bee’, in M. V. Srinivasan and S. Venkatesh (eds), *From Living Eyes to Seeing

Horridge, G. A. 1998a, ‘Spatial coincidence of cues in visual learning by the

Horridge, G. A. 1998b, ‘Pattern vision by the honeybee (*Apis mellifera*): training
 on two pairs of patterns alternately’, *Journal of Insect Physiology*, vol. 45,
 pp. 349–55.

Horridge, G. A. 1999a, ‘Two-dimensional pattern discrimination by the
 honeybee’, *Physiological Entomology*, vol. 24, pp. 1–17.

Horridge, G. A. 1999b, ‘Pattern vision by the honeybee (*Apis mellifera*) is
colour blind for radial/tangential cues’, *Journal of Insect Physiology*, vol. 184,
 pp. 413–22.

Horridge, G. A. 1999c, ‘Pattern vision of the honeybee (*Apis mellifera*). The
 effect of pattern on the discrimination of location’, *Journal of Comparative

Horridge, G. A. 2000a, ‘Pattern vision of the honeybee (*Apis mellifera*). What is
 an oriented edge?’, *Journal of Comparative Physiology*, vol. 186, pp. 521–34.

Horridge, G. A. 2000b, ‘Seven experiments on pattern vision of the honeybee,

Horridge, G. A. 2000c, ‘Visual discrimination of radial cues by the honeybee
 (*Apis mellifera*), *Journal of Insect Physiology*, vol. 46, pp. 629–45.

Horridge, G. A. 2000d, ‘Pattern vision of the honeybee (*Apis mellifera*): the
discrimination of location by the blue and green receptors’, *Neurobiology of
 Learning and Memory*, vol. 74, pp. 1–16.

Horridge, G. A. 2003a, ‘Discrimination of single bars by the honeybee (*Apis

Horridge, G. A. 2003b, ‘The visual system of the honeybee (*Apis mellifera*): the
 maximum length of the orientation detector’, *Journal of Insect Physiology*,

Horridge, G. A. 2003c, ‘Visual resolution of gratings by the compound eye of the

Horridge, G. A. 2006b, ‘Some labels that are recognized on landmarks by the honeybee (Apis mellifera)*’, *Journal of Insect Physiology*, vol. 52, pp. 1254–71.

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Kühn, A. 1919, Die Orientierung der Tiere im Raum, Fischer, Jena.

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Nelson, R. C. and Aloimonos, J. 1988, ‘Finding motion parameters from spherical motion fields (or the advantages of having eyes in the back of your head)’, *Biological Cybernetics*, vol. 58, pp. 261–73.

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Praagh, J. P. van, Ribi, W., Wehrhahn, C. and Wittmann, D. 1980, ‘Drone bees fixate the queen with the dorsal front part of their compound eyes’, *Journal of Comparative Physiology*, vol. 162, pp. 159–72.

Reichardt, W. and Poggio, T. 1979, ‘Figure-ground discrimination by relative movement in the visual system of the fly. Part I. Experimental results’, *Biological Cybernetics*, vol. 35, pp. 81–100.

Reichardt, W., Poggio, T. and Hausen, K. 1983, ‘Figure-ground discrimination by relative movement in the visual system of the fly. Part II. Towards the neural circuitry’, *Biological Cybernetics*, vol. 46 (Supplement), pp. 1–30.

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Strausfeld, N. J. 2002, ‘Organization of the honey bee mushroom body: representation of the calyx within the vertical and gamma lobes’, *Journal of Comparative Neurology*, vol. 450, pp. 4–33.

Tye, M. 1997, ‘The problem of simple minds: is there anything it is like to be a honey bee?’, *Philosophical Studies*, vol. 88, pp. 289–317.

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

WHAT DOES THE HONEYBEE SEE AND HOW DO WE KNOW?

Whewell, W. 1858, Novum Organon Renovatum, Parker, London.
