

terra australis 34

Terra Australis reports the results of archaeological and related research within the south and east of Asia, though mainly Australia, New Guinea and island Melanesia — lands that remained terra australis incognita to generations of prehistorians. Its subject is the settlement of the diverse environments in this isolated quarter of the globe by peoples who have maintained their discrete and traditional ways of life into the recent recorded or remembered past and at times into the observable present.

Cover image: Looking southwest from the entrance of Bridgewater South Cave across the southern sections of Bridgewater Lakes towards Cape Duquesne, 10 February 2008 (Photo: Ian J. McNiven). Archaeological excavations at the cave by Harry Lourandos (1983) in the 1970s demonstrated Aboriginal occupation back to c.13,000 years ago. Palynological coring of the lakes by Lesley Head (1988) in the 1980s demonstrated over 7500 years of vegetation change, some of which reflected low-level Aboriginal landscape burning.
