

# Figures

1.1	Structure and content of Protected Area Governance and Management book	5
1.2	A learning journey for middle-level protected area managers focused on information underpinning practical and operational aspects	6
1.3	A learning journey for senior protected area managers focused on information that underpins protected area systems-level concepts and practice	7
2.1	Naturalness and IUCN protected area categories	20
2.2	Growth in the percentage of terrestrial and marine area covered by protected areas, 1990–2014	21
2.3	Total areal extent (km <sup>2</sup> ) of protected areas in the WDPA in each of the IUCN management categories, 1950–2014	22
3.1	Distribution of the 222 natural and mixed World Heritage sites and case study locations (red markers)	46
3.2	Global diversity of mammal, bird and amphibian species	54
3.3	The eight biogeographic realms and 14 biomes of the world	56
3.4	Mountain areas and mountain protected areas of the world	63
3.5	The human footprint on the global land area	66
3.6	Protected areas of the world	67
3.7	Percentage area of each terrestrial ecoregion covered by protected areas	68
3.8	Percentage area of each marine ecoregion (out to 200m depth) covered by protected areas	69
3.9	Biodiversity hotspots and high-biodiversity wilderness areas of the world	71
3.10	Protection status of Alliance for Zero Extinction sites	72
4.1	Origin and dispersal of modern humans	84
4.2	Returning stolen movable heritage	94
4.3	Elements of a cultural landscape	104
6.1	Ecosystem services and related goods from protected areas	147
7.1	Incomplete overlap between conserved and protected areas	178
7.2	Incomplete overlaps among conserved areas, protected areas and privately conserved areas	183
7.3	Incomplete overlaps among conserved areas, protected areas and ICCAs	186
7.4	The modified IUCN Protected Area Matrix: A classification system comprising both management category and governance type	187
7.5	A schematic summary of governance characteristics	195
8.1	Strengths, weaknesses, opportunities and threats analysis	214
8.2	The park management framework used by the NSW NPWS	217
8.3	Percentage of terrestrial area of nations reserved as protected area in 2014	224
8.4	The IUCN Protected Area Matrix: A classification system for protected areas comprising both IUCN management category and governance type	236
9.1	Framework for clinical assessment	257
9.2	Kolb's Cycle of Experiential Learning	259
9.3	A systems approach to capacity development	261
9.4	Dynamic model of capacity development	262
9.5	The shift in paradigm to a capacity development approach	263
9.6	Five core capabilities required to achieve organisational capacity	264
10.1	Key points in the chapter	294
10.2	A system can be conceived of as a basin	299
10.3	A simplified representation of a complex social-ecological system	306
10.4	Using root-cause analysis	317
11.1	The continuum of understanding from the gathering of data, the presentation of information, generation of knowledge and ultimate wisdom	329

11.2	The Conservation Measures Partnership adaptive management project planning cycle	331
11.3	Deforestation (red areas) in Virunga National Park (outlined in blue), Democratic Republic of Congo, measured from 2000 to 2012	337
11.4	The six knowledge products delivered through the IUCN	344
11.5	PARCC project process for production and sharing of global, regional and national data	348
13.1	The planning hierarchy	384
13.2	Rational, adaptive and participatory planning process	404
13.3	The Open Standards for the Practice of Conservation	406
13.4	Revised Open Standards Approach as Healthy Country Planning using more appropriate language and simplified concepts	408
14.1	Hierarchy of governance and participation	417
14.2	General framework to inform design of an engagement strategy	422
16.1	Example of a three-level threat classification	476
16.2	The main threats to the protected area system of Ghana	478
16.3	Poaching intensity in the protected areas of Ghana	478
16.4	Key steps in assessing threats to biodiversity in protected areas	482
16.5	Adaptive management approach for invasive species	487
16.6	Distribution of four representative invasive species, India	488
17.1	IPCC climate change projections for two carbon dioxide concentration levels for temperature, precipitation, sea-ice extent and ocean surface pH	500
17.2	Climate extremes: probability schematics	501
17.3	Modelling of impacts of climate change on vascular plants in Australia where red identifies greatest change and green, least change	507
17.4	Forecast changes in the distributions of five major biomes to the end of the 21st century	508
17.5	The conservation policy cycle	514
17.6	Assigning species to an 'adaptation management response space'	518
18.1	Schematic illustration of the goods and services derived from geodiversity: The grey layer above the bedrock represents soil	539
18.2	Steps in the use of the Geoheritage Toolkit to identify and assess sites of geoheritage significance	543
18.3	Logo of the UNESCO-assisted Global Geoparks Network	544
18.4	Core and additional values of geoheritage	545
19.1	Global distribution of wetlands	572
19.2	Pantanal wetlands, South America	577
19.3	Cosumnes River Preserve, United States of America	578
19.4	Kruger National Park, South Africa	581
19.5	Links between water basins at different scales and of different types	584
19.6	Integrated lake basin management	585
19.7	Global peatland distribution	586
19.8	Chilika Lagoon, India	589
19.9	Distribution of inland freshwater Ramsar sites	591
19.10	Kakadu National Park	592
19.11	Millingerwaard, the Netherlands, showing nature reserves developed along the Rhine River	595
19.12	Ecological movement pathways	596
19.13	Catchments and jurisdictional boundaries	597
19.14	Murray–Darling Basin, showing the location of 16 designated Ramsar wetlands	598
20.1	Global extent of Marine Protected Areas (MPAs)	612
20.2	Ecosystem Connectivity	618
20.3	The Kimbe Bay Marine Management Area, including Locally Managed Marine Areas (LMMAs) established within areas of interest	624
20.4	OSPAR network of MPAs, as of December 2012	627
20.5	Traditional-use marine resource agreement area	628

21.1	The relationship between ecological function and biodiversity	654
21.2	Some of the world's most important protected areas for conservation of amphibian, bird and mammal species	656
21.3	The protected area management loop	657
21.4	Current and historical distribution of the greater prairie chicken ( <i>Tympanuchus cupido pinnatus</i> ), USA	661
21.5	Combined threat and severity ratings to determine threat magnitude	671
21.6	Combined assessments of threat irreversibility and magnitude to prioritise management actions	671
21.7	Threat summary rating for an example ecosystem	671
22.1	Indicative location on the African continent, Rwenzori Mountains National Park, Uganda	690
22.2	Indicative location on the Indian subcontinent, Nanda Devi Biosphere Reserve, India	695
22.3	Indicative location in Europe, Mount Athos, Greece	699
22.4	Indicative location on the Iberian Peninsula, Montserrat, Catalonia, Spain	702
22.5	Steps in the conservation planning process	706
23.1	Illustration of incremental, tourism operator-driven developments within protected areas, for a hypothetical waterfall attraction	724
23.2	Butler's tourism destination lifecycle	725
23.3	Scales of tourism businesses	729
23.4	Brand positioning pyramid, Ningaloo–Shark Bay, Australia	735
23.5a	Uluru-Kata Tjuta National Park and World Heritage Area Australia: standard image	736
23.5b	Uluru-Kata Tjuta National Park and World Heritage Area Australia: 'Uluru experience'	736
24.1	The operations cycle	753
24.2	Corporate 'line of sight' to operations	754
24.3	'Levels of Protection' step process for determining environmental and cultural program operational priorities	760
24.4	'Levels of Service' step process for determining visitor experience program operational priorities	761
24.5	Protected area action plan components	762
24.6	Sustainability principles and benefits	772
24.7	Key sections in a stakeholder and communications plan	773
26.1	Key tasks for the incident controller	836
26.2	Incident management team structure	839
27.1	Indicative map of actively managed large-scale connectivity conservation areas (corridors) on Earth	859
27.2	IUCN WCPA Connectivity Conservation Management Framework	861
27.3	Application of the IUCN WCPA Connectivity Conservation Management Framework at various spatial scales	862
27.4	Community and State Protected Areas of the Gori, Darma and Kuti River Basins in the Western Himalaya	871
27.5	The location of the Kgalagadi Transfrontier Park and its constituent national parks in Botswana and South Africa	875
28.1	National progress towards the CBD 30 per cent and 60 per cent targets for PAME assessments	897
28.2	IUCN Framework for evaluating Protected Area Management Effectiveness (PAME)	901
28.3	Process of designing and implementing PAME	903
28.4	Example of simple graphical reporting, from a RAPPAM report	915
