

LIST OF FIGURES

Figure 1 The ‘triangle of biosensitivity’	xlvi
Figure 1.1 Tony McMichael in Anchorage, Alaska, where he spoke at the 20th International Epidemiological Association congress..	24
Figure 3.1 A.G. Stokes, <i>Veggies in the sky</i>	52
Figure 3.2 John Reid, <i>View to Grose Valley from Enniskillen Orchard Stall</i> , 2010.	53
Figure 3.3 Marzena Wasikowska, <i>Western Sydney Landscape Contestants 1–4 (detail: 1 Intensive Real Estate)</i> , 2010.	53
Figure 3.4 Leo Robba, <i>Contested Landscapes: Split Views</i> , 2010	54
Figure 3.5 Jo Donnelly, <i>Populate and Perish!</i> , 2010	54
Figure 3.6 Judith Ringger, <i>‘cheque’ burial</i> , 2010.	55
Figure 3.7 Aria Stone, <i>Going ... Going ... Gone</i> , 2010	55
Figure 3.8 Sue Downes, <i>Keep it cool</i> , 2010	56
Figure 4.1 Levels of work organisation primary interventions and where critical exposure levels can be used to inform these interventions.	88
Figure 7.1 Developmental status at different ages by thirds of lifetime average blood lead concentration at age two years.	140
Figure 9.1 The demographic transition in Thailand.	157
Figure 9.2 Multilevel eco-social health model.	160
Figure 9.3 Publications over time for two seminal cohort studies. Data not cumulative.	162
Figure 9.4 Mean heights (95 per cent CIs) among Thai men classified by their location (whether rural or urban) at age 10–12.	167
Figure 9.5. Publications arising from the Thai Cohort Study each year.	168
Figure 10.1 Trends in annual total rainfall, 1960–2009 (millimetres per decade).	181
Figure 10.2 Broadly defined non-metropolitan climate change impact hotspots in Australia.	184
Figure 11.1 Barbara McClintock in the laboratory, 26 March 1947.	198

Figure 11.2 Varieties of maize.	199
Figure 12.1 The dimensions of epidemiological research.	216
Figure 14.1. World hunger (millions) and 2015 hunger targets, 1990–2015. . .	269
Figure 14.2. Global per capita production of grain and soy, 1961–2013, total and partly adjusted for ethanol from US maize.	275
Figure 18.1 The biogas compound. The foreground building contains the latrines and the adjacent building is the community kitchen.	359
Figure 18.2 The community towards the end of the wet season, September 2012, looking east from the main road over the river.. . . .	360
Figure 18.3 The community during the dry season, February 2013.	360
Figure 19.1 Mavis Ngallametta and Stuart Korkaktain discussing the management of their country, Kendal River, Cape York.	370
Figure 24.1 Potential relationships between climate change, biodiversity loss and the ‘emergence’ of vector-borne disease problems.	443
Figure 28.1 Grey and green space in urban areas.	494
Figure 28.2 Characteristics of urban trees in northern and eastern Adelaide suburbs.	498
Figure 29.1 Multiple cross-species origins of human immunodeficiency viruses (HIV).	516
Figure 29.2 Co-speciation of lymphocryptic herpesvirus (EBV) genomes and their hosts. The estimated time back to the most recent common ancestor is broadly the same for virus and host.	518
Figure 29.3 Gamma-retrovirus genomes can be transmitted either vertically as Mendelian traits or horizontally as infectious virus particles.. . . .	523
Figure 36.1 The urban and rural population of the world in millions, 1950–2050.. . . .	596

This text is taken from *Health of People, Places And Planet: Reflections based on Tony McMichael's four decades of contribution to epidemiological understanding*, edited by Colin D. Butler, Jane Dixon and Anthony G. Capon, published 2015 by ANU Press, The Australian National University, Canberra, Australia.
