with rainforest understorey in the
O'Shannassy catchment, central highlands,
Victoria. (1800 t C ha⁻¹ of biomass
carbon). Photo: Luke Chamberlain.

The provision of unpublished data from Andrew Claridge, Phil Gibbons, Kris Jacobsen and Charlie Mackowski is gratefully acknowledged. In collaboration with these researchers, a technical paper is in preparation, detailing methods and results, for submission to a scientific journal. Any errors in this report, however, and the comments on the results' policy implications, are solely the responsibility of Mackey, Keith, Berry and Lindenmayer.

We are grateful to The Wilderness Society Australia for a research grant that supported the analyses presented in this report. Thanks also to Clive Hilliker, Luciana Porfirio and Andrew Wong for their assistance in the technical production of this report, and Michael Roderick and Henry Nix for helpful comments on a draft. We thank the photographers, Sarah Rees, Luke Chamberlain, Rob Blakers, Chris Taylor, Ern Mainka, Geoff Law, Andrew Wong, Ian Smith, Michael Hodda and Peter Halasz, for the use of their images. These analyses also drew on data and models developed as part of an Australian Research Council Linkage grant, LP0455163.
