LEAVING THE SIMPSON DESERT

Luise Hercus

INTRODUCTION

Whenever — as appears to be common these days — people claim they are the first to cross the Simpson Desert from south to north or west to east, walking or running, in winter or summer, they forget that others were there before them: the Simpson Desert was home for generations of Aboriginal people. The southern Simpson Desert was the territory of the Wangkangurru. Their only permanent source of water was what they called *mikiri*. These were small soaks: they were described for the first time by David Lindsay in the journal of his expedition into the Simpson Desert in 1886. He visited nine of these soaks with the help of a Wangkangurru man named ‘Paddy’. Thanks to brilliant navigation by Dennis Bartell, who had studied Lindsay’s journal and worked out distances in camel-time, the prehistorian

Luise Hercus is Reader in Sanskrit at the Australian National University. She has been studying Aboriginal languages and oral traditions for over twenty years, particularly in areas where there are only a few speakers left.

22
Peter Clark and I were able to visit these nine soaks in May 1983. It was a unique experience to see the places which I had heard about for many years from Wangkangurru people, and to find exact confirmation of what they had spoken and sung about. For instance there is a deep trench at the Pirlakaya soak, there are white rocks on the sandhill just north of Pilpa.

A brief account of this trip, with strong emphasis on the use of four wheel drive vehicles, appeared in the *Overlander*, August 1983 (pp.30-37). It was written by Tony Love.
Plate 2: At the Pudlowinna soak, Dennis Bartell and Tony Love are using the hand-auger.

Plate 3: The remains of a humpy at Parlani soak.
LEAVING THE SIMPSON DESERT

Beelpa soak. The soaks are all different from one another, they have their own special character, but in some ways they are all similar: they are shallow depressions in low-lying areas. Wangkangurru people got down to the water by digging narrow tunnels, in some cases over 20ft deep. There were more of these soaks than the nine visited by Lindsay, at least sixteen that we know of, with water of varying quality. After rains people could move away from the soaks and get water from the many irpi ‘claypans’ and ikara ‘swamps’. There are accounts of people digging deep channels in the claypans so that water would stay there longer to delay the necessity of having to go back to the soaks. One of the traditional song cycles of Wangkangurru literature deals with the theme of the poor taste of the water of one of the soaks, Pulupudunha (Lindsay’s ‘Boolaburtinna’ soak) and people longed for rain so that they could go out to the swamps, but the soaks were always there when all the surface water had dried out: there was no reason to leave the desert.

There can be no doubt about it, Wangkangurru people lived and died in the desert: the artefacts around the mikiri and the burial sites bear witness to that. They had matrimonial and ceremonial links with lower Southern Aranda people, and trade-links much further afield still: there are accounts of Wangkangurru people going to Anna Creek to get grinding dishes, and to Parachilna in the Flinders Ranges to collect red ochre. This meant that groups of Wangkangurru men visited their neighbours (as did other Aboriginal people) and went on long expeditions, but their home was, and remained, the Simpson Desert. In the summer of 1899-1900, however, lured by tales of plenty, they left the Simpson desert never to return.

By 1965 there were only three Wangkangurru people left who were born in the desert. They were:

Maudie Naylon Akawiljika, born about 1885, probably at Marrapardi, the Murraburt soak. She died in Birdsville in 1981.
Mick McLean Irinjili, born about 1888 at Pirlakaya, the Beelaka soak. He died at Pt Augusta in 1977. His immense store of traditional knowledge made him a legend in his own lifetime.
Topsy McLean Ikiwiljika, born in about 1898 at Puluwani, the Poolowanna soak, called Pudlowinna by Lindsay. Topsy, who was Mick McLean’s sister, was only a small child when she left, and had to be carried. She only had second-hand knowledge about the desert, from her parents and other relatives. She died in 1974.

Both Mick McLean and Maudie Naylon were in ‘the mikiri country’ long enough to regard it as their home and they constantly spoke of it, particularly Mick. The late Graham Hercus and I, and later Bob Ellis (from the Aboriginal Heritage Unit of South Australia) made several attempts to take Mick McLean back to his country, but he was old and ill, and convinced that he would die there, which he very nearly did.

Mick McLean was a brilliant speaker of Southern Aranda as well as Wangkangurru and worked with T.G.H. Strehlow. He naturally wanted to talk about the desert. In his famous 1970 article on ‘Totemic Landscape’ T.G.H. Strehlow appears to have misunderstood Mick McLean when he used Wangkangurru terms: this is probably one of the very few minor errors he ever made. ikara (‘jikara’) is the Wangkangurru word for ‘swamp’. Strehlow thought it meant ‘freshwater lake’, and then listed under that name most of the Simpson Desert.

2 We found burial sites in the immediate vicinity of several of the mikiri. See Peter Clarke (MS).
soaks. He wrote (p.93): ‘Erenjeli had been given the names of the larger freshwater lakes by his male relatives, who had left this area only about the turn of the century’.

In the note referring to this passage (p.135) he listed Pulawini, Marabati, Murkarana, Kalijikana, Jatakna, Palkuru, Palarinuna, Pirbana, Pilakaija, Kalalumba, Parapara, Walbarka, Puruputu, Palani, Madluna.

These places were soaks: this is corroborated by the evidence of the last desert Wangkangurru people, by Lindsay’s description, and by all the evidence we gathered on our visit. There was nothing secret-sacred about either the names or the actual soaks, nothing that belonged only to the ‘male relatives’. Everybody had to know the names, everybody had to live at the soaks when the surface water dried out. There were long song cycles and myths centred on the soaks. All these myths had secret-sacred sections, but by sheer necessity the soaks themselves had to be common property. Maudie Naylon knew the names and the places and the greater part of the myths just as well as did Mick McLean.

There were secret-sacred places in the Simpson desert, but they were not soaks: apart from several outcrops of gypsum these were claypans, such as for instance Marurr, the Two Men (Initiation History) ritual centre. Men went there for ceremonies when conditions were suitable. Some women had to be present too, but only on the periphery: they certainly could not visit this site casually when foraging.

In conversations with Mick McLean we usually somehow ended up speaking about ‘the mikiri country’. In August 1970, he gave a detailed account of how his people left the desert. This account is in Wangkangurru with a few sentences in English, and it is transcribed here in a practical orthography, and with a grammatical gloss: details of the orthography and of the abbreviations used in the gloss are listed at the end of this paper. Some minor changes have been made to the sequence of the story as told by Mick McLean, particularly where we had some interruptions.

Translation

1 M. We were all living at Balcoora.³ There was my female cross-cousin, older than me,⁴ daughter of my father's sister, and there were Riley's⁵ big sister Anpanuwa and her younger brother.

2 This male cross cousin of mine and the two girl cousins older than me, we all used to dig holes in the loose

*M. refers to Mick McLean. As the whole text is from him the abbreviation is not repeated except where there are a few questions from L. (Luise Hercus).

³ The Balcoora soak is within the Simpson Desert Conservation Park. Lindsay (MS: p.4) describes his visit there in 1886 as follows:
‘... top of sandhill at 6.50 — met 5 natives who were friends of our boy — they said water was only a “pickaninny way” travelled on until 8 oclock being tired of the natives “one fellow sandhill then catch him water”.
Camped on a good flat — no spinifex today.
Saturday 9th. Unable to get an observation for Latitude. Thermometer 48° at 5.15 a.m. On bearing 45 at 6.45 over a sandhill and at 6.55 came to the well.... The well is on the slope of a depression, not in the centre as is the case with the others, it is 20ft deep and sloping.
Some large native Miamias are here’. 
Subsequently (p.6) he mentions:
‘We had brought another native with us from Balcoora, our boy not being very sure about finding these later wells’, [he is referring to soaks in the eastern part of the Simpson desert].

⁴ *apirla*. The basic meaning of this kinship term is 'unmarriageable woman of the opposite moiety and of one's own or the alternate generation level'. The shade of meaning intended here is 'older female cross-cousin', and it may refer to Maudie Naylor Akawilijka: according to her own account she spent some of her earlier years at the same camp with Mick McLean, and they both jokingly recalled how she could boss him about because she was a big girl while he was only little. She however probably left earlier and was not part of the group that finally left from Balcoora. The term *apirla* is given as 'abila' by Elkin (1938:64). It corresponds to the Adnjamathanha word ngaparla, (for the loss of initial ng see Hercus 1979 and for details about ngaparla see Schebeck, Hercus and White 1973). Interestingly enough the geographically intervening language, Arabana, uses the less closely related term pilja.

⁵ Anpanuwa was the second oldest of the Naylor family. She had several brothers; the brother who was close in age to Mick McLean was probably Jimmy Naylor Arpilintika, who died in Birdsville in about 1965. His brother Riley Naylor was considerably younger: he was born after the departure from the Simpson Desert. He was a brilliant stockman and horse-breaker (see the illustration 'Riley rides the skewbald colt' in Farwell 1950 p.32). He died in Port Augusta in 1978.

on each, but it was sweet.
We would take them back
(to our humpy) and cook
them.

yatjapara was the Arabana-Wangkangurru name for the orange chat, Ephthianura aurifrons. It seems
that chats were widely called 'sparrow' in the Lake Eyre basin. Gason 1879:286 mentions a Diyari
term for 'sparrow', and Johnston 1943:286 considers that the name 'sparrow' refers to the closely
related gibber bird or desert chat Ashbyia lovensis, but this does not occur in Arabana country and
yatjapara certainly does. Although they can exist in a very arid environment all the chats are easily
attracted to water. Two important mound-springs in Arabana are called Yatjaparanha on account of
this. It was usually considered pathetically small as a food item, and this feature is emphasised in
several legends, most notably in the Emu History from Mierantana Waterhole on the Macumba, where
a grandson feeds his blind grandfather on yatjapara 'sparrows', while he himself has lovely feasts of
emu down-wind from where the old man is sitting.

murlapara is the top-knot pigeon which was considered a much more desirable item of food than
'sparrows'.

6 L. Was it only the boys who did this, not the men?
M. The men were out, walking about, there were
many, many men (at Balcoora). The women went
out searching for grass seed in the swamps, and espe-
cially the seed of pigweed (Aizoon quadrifidum,
common on the edges of clay-
pans as well as dunes).

7 We boys and girls sat by the soak. But my older cross-
cousin, he was a big boy, a youth. He was walking about
killing meat while we were eating 'sparrows'.

8 We boys played on the salt-
lake.
L. (That game called)
round stone?'
M. Only the big grown-up
men played that game.8

9 We stayed at Balcoora time
and time again.
We knew nothing of weeks,
or months, or years; we had
no idea of how long we had
been there. We just stayed
there one night after
another.

8 kultji means 'round stone' and the term was also used for the game which was played with such a
(Footnote 8 continued on next page)
We did know the cold of winter-time and the heat of summer. We all lived there together and my father went about killing carpet-snares:\footnote{9} we had meat and were satisfied. We weren't really worrying about food, not like today when people eat every five minutes!

In the end . . .

L. The soak dried out?
M. No, we had plenty of water. There were a lot of humpies there and we all got water from the soak, we had a big camp there.

There was a big camp at Murraburt (the westernmost Simpson soak). There was also a camp at Mokari\footnote{10} and a big camp at Padlarina. That's not far from the Kallakoopah. We came through there afterwards, when we were getting ready to leave that country.

\footnote{8 continued} stone. Mick McLean always stressed that the game was like cricket. It was played in large flat areas such as claypans by grown men as light entertainment after special ceremonial occasions, particularly initiation. There is a song-sequence about the game in the Two Men Initiation History.

\footnote{9} Carpet-snakes were a much sought after item of food throughout the Lake Eyre basin, but they were hard to catch. Men risked their lives digging for them in the sandhills: they dug out the burrows of carpet-snakes and the resulting tunnel could easily cave in.

\footnote{10} Mokari is in the western Simpson desert. It is not one of the main soaks: it is known as a Dog History site. The name Mokari is now used for a well developed air-strip used in oil exploration in the Macumba lease area of the Simpson desert.

13 L. Why did you leave the
   *mikiri* country?
M. I don’t know. They (the
   adults) started saying: ‘We’ll
   go down south to the creek
   and stay there by the flood-
   waters’.

14 ‘There is water flowing in
   the creek, we can stay by
   the creek and eat boney
   bream’. They talked like
   this amongst themselves and
   so they left their own
   country.

15 They were going to Poona-
   runna.11 There were white-
   fellows there, living on an
   out-station, but I didn’t
   know that then.

16 My father had seen white-
   fellows, but my mother and
   I hadn’t. I was only a little
   boy when he left me at
   Balcoora to go and get red
   ochre from over there at
   Parachilna.

---

11 The Poonarunna out-station was in use for only a short while, it was already abandoned at the time of
Gregory’s visit in 1901. When Mick McLean first arrived there it was still inhabited: this dates the
events described by Mick McLean in this paper as taking place in 1899-1900. This date coincides with
drought conditions over much of southern and central Australia, and good rains in parts of Queensland,
which caused floods in the Diamantina and the Kallakoopah which is simply a branch of the Diamantina.
16 (continued)
The end of that railway was along Beltana\textsuperscript{12} in that time, \textit{waru yarndi}.
long, long ago.

I did see\textquoteleft m in the end, when I went to Peake,
Warrina.

12 This statement involves a chronological problem. At the time of the exodus from the Simpson desert
Mick was about 12 years old, and there are other pieces of evidence which confirm that he was born
about 1888. The railway line ended at Beltana in 1881, it was continued to the north after that, reaching
Marree in January 1884 (Fuller 1975), so Mick McLean\textquotesingle s father \textit{Pintha-Miri} must have been to
Parachilna before Mick was born. It seems likely that Mick telescoped into one the two or more visits
to Parachilna that he had heard about as a child. Obviously – and Mick\textquotesingle s account makes this very clear –
the men who had been on the long and adventurous journey talked and sang about it for years. (For
discussions about journeys for red ochre see Gason 1879:280, Horne and Aiston 1924:128, and Elkin
1934:5).

23 Near the soak there was always nardoo in the swamps, native pear (Cynanchum floribundum), and also pigface and parakeelya in the wintertime. In the heat of summer they still foraged to satisfy our hunger and we ate mulga-apples, mulga gall.

24 The roots of trees were dry when they left that country to go down to the creek. L. Was it to see old man Marna-Wiljpa? M. It was to go to his country, he was calling for us.

25 There was a big lot of wild parsnip (Trachymene glaucifolia) growing on the loose soil, watered by the flood. The creek was flowing.

26 That creek was not like this the time we went there (in August 1969). Some time I'll take you to show you their country, but the creek has been buried and filled in with soil.

13 At the turn of the century the ritual leader of the Fish and Crane History was Marna-Wiljpa an old man of the Wangkatjari group of Wangkanguru who lived in the Marlupapu country along the Kallakoopah and the Diamantina. The name Marna-Wiljpa means 'Mouth Open' and refers to the Ancestral Cod.
They finally set out, they got ready to travel south. They went carrying water in waterbags made of hare-wallaby (*Lagorchestes*) skin and rat-kangaroo (*Caloprymnus*) skin. They took water from the soak (at Balcoora). It was good, cool water. You don’t want to drink all the time.

There was cold water in the bags, the waterbags, and we pulled out the waterbags to pour water into a wooden dish. The women carried the water for everybody, they went without the (heavy) nardoo-stones.

My mother carried Topsy in a wooden dish. I was a boy and went running along. My two younger fathers (my father’s two younger brothers) were there too. One died at Finnis Springs, the other at Macumba.

We started walking and on our way we stopped at the Pudlowinna soak to the south (of Balcoora). We stayed there for two days before leaving. We headed south from Pudlowinna, but then we came back and stopped again at Pudlowinna to get more water.

---

14 Pudlowinna is Lindsay’s version of the name of the soak north of the big saltlake named Poolowanna on modern maps. It is not very far from Balcoora to Pudlowinna.

(Footnote 14 continued on next page)
My grandmother died, my grandmother from Urlirda (an important Southern Aranda site of uncertain location on the lower Finke). She was my paternal grandmother, the grandmother of the opposite moiety, an old, very old woman. They buried her at Irlipaltja, away to the south, between Pudlowinna and Padlaringu.

That poor old woman just couldn’t walk any further, she was there just like a bullock (that has been overrun). She had become quite emaciated and was so weak that she could not move. She was so weak that she died there. Just like an old cow she just couldn’t walk any further.

(Footnote 14 continued)

Lindsay gives the following account (MS:p.11):
‘This was a good well with a good supply but some dead thing must have got into the water as it was absolutely rotten and made us sick’.
He also speaks of a ‘magnificent flat’.

Pudlowinna is indeed situated in a well vegetated low-lying area. The immediate surrounds of the soak were surprisingly green at the time of our visit to the area in 1983 and on a subsequent occasion in 1984. This was the only soak at which we saw reasonably preserved wooden artefacts, a shield and a spear.

Irlipaltja is not a soak. It is probably the name of a particularly big sandhill: sandhills of major size or significance all had distinct names in Wangkangurru country.

Disrespect was the last thing Mick McLean would have intended by this expression. He loved his paternal grandmother and moreover she represented his main link with the southern Aranda country around the lower Finke. He was simply evoking a pathetic picture, one that he must have witnessed many times while mustering.

On another occasion Mick McLean described to Sally White and me how his father had actually carried the sick woman on that trip over the sandhills for several days until she died.

33 L. And did they stay there for three days?
M. For my paternal grandmother? Yes. We sat there for three days and then we got ready to travel south to Padlaringu, and then we went south again, travelling south all the time.

34 L. What did you eat?
M. There was plenty of meat, there were bilbies (*Macrotis lagotis*), lesser bilbies (*Macrotis leucura*), and hare wallabies (*Lagorchestes leporoides*).

L. Didn’t you have any grass seed?
M. We had grass seed too, they used to carry it on their heads.

L. On top of the headband?
M. In a ‘nest’. They tied up this nest and put it on their heads on the headband. They carried grass seed so that they could grind flour. This is how they travelled on the sandhills, over sandhill after sandhill. They cooked food on their journey, and they slept in a different camp every night.
35 *uta, wanga-wanga yuka-lhuku wanka-lhuku-thu*

*thangka-ngura kaRu.*
sit -CONT there.

35 Then early one morning as we were walking and going up (a sandhill) the old man said:
‘This sandhill here is called *Thikira*. It (represents) the Ancestral Crane, it belongs to the Ancestral Crane. It is a high and steep sandhill.
This is where the Crane left (the creek country).’
‘It is here that the Kallakoopah, ‘the Small Creek’ (as opposed to the Diamantina, the Big Creek) bends and turns straight south, it goes south altogether then.’

36 There is a soakage here, a main soakage that is called *Pawa-mingka* ‘Grass seed Hole’. It is right in the creek, and there is a big sandhill just above.
That high sandhill might be flat now, I don’t know, like those big high sandhills we were talking about.17
The wind might have blown them away altogether.

37 There (on this steep sandhill?) is this stone from the History Time . . .
*L. When did you first see another mob of people?*
*M.Over there on the Big Creek, the Diamantina.
There was nothing, nobody on the way. They were living on the Diamantina.

17 The sandhills in question were on the western side of the Simpson desert in the area around Tuppana waterhole on the lower Macumba. Mick McLean had an uncanny memory for places; he led us to the remains of a cattle-rustler’s yard on the lower Diamantina about seventy years after he had last visited that area. Near Tuppana however the sandhills had been eroded and changed so much that even he very nearly got lost.

37 (continued)

Beelaka is further east (than Balcoora). Most of the people from that country had already gone. They were living by the Diamantina, at Marree and at Killalpannina.

38 We went on. We were not the last people, the last were (those with) my uncle, my proper uncle Imatuwa. He came back for his mother and those with her. They came behind, they were behind us. He was chasing people (out of the desert), he had already left before, but came back.18

39 We went digging a soakage for water, my father showed us. ‘Here is soakage water!! Now dig!’

40 They went to kill meat on the sandhill, they got rat-kangaroos (Caloprymnus) and many carpet snakes, goannas and frillneck lizards. They got them quite close by. A mob of old men killed them, Riley’s father,19 and all those old men who are now dead, my mob, my own mob. They are all dead now.

18 Mick McLean recalled on another occasion how Imatuwa had left the desert earlier with a group of people from Beelaka, and how he returned to collect all his relatives.

19 Riley Naylon’s father Ngumili was a ritual leader of the grass-seed history.

²⁰ The reference here is to an increase site for frillneck lizards and for witchetty grubs. Box-bark had been used in the ritual and we were looking at the trees from which bark had been stripped long ago. The site is in Arabana country near Mt Coppertop in the Peake and Denison Ranges.

²¹ The soaks in the Simpson desert are surrounded by large deposits of fragments of bones of animals, birds and lizards that had all been cooked and eaten there. The mammal remains were of bettongs and other small marsupials, there was no sign of rabbit remains. The only exception was at Murraburt, the westernmost soak, and we surmised that people must have revisited this soak, coming from Dalhousie at a later period. (Peter Clarke, MS).
LEAVING THE SIMPSON DESERT

LINGUISTIC EFFECTS OF THE MOVE FROM THE DESERT.

The people who lived in the Simpson Desert following the life-style described above by Mick McLean called themselves Wangkangurru mikiri-nganha 'Wangkangurru people from the soaks' (the name Wangkangurru is based on wangka 'speech', ngurru 'strong, hard'). They also called themselves Wangkangurru Mungathirri-nganha 'Wangkangurru from the high sand-hill country'. These terms were used to distinguish them from the Wangkangurru karla-nganha, the Wangkangurru from the Creek (i.e. the Diamantina and the Kallakoopah). The people 'from the Creek' also called themselves Marlupapu-nganha 'from the Marlupapu country', as well as Wangka-tjaka and Wangka-tjari 'little language'.

Wangkangurru people obviously had an advantage over some of the other groups in the northeast of South Australia: the Yawarawarka for instance were fenced out of their own lands, poisoned food was put out for them and they were hunted down. They had to seek refuge at the mission at Killalpannina (see Farwell 1950:160). Wangkangurru people left their country of their own volition, over a prolonged period, and the exodus described by Mick McLean was the second-last of what was presumably a number of similar events. Wangkangurru people, both 'from the Creek' and 'from the high sandhills' went to a number of different destinations as is evident from the testimony of the people themselves and from all the written sources, particularly Horne and Aiston (1924) and Basedow (MS). They went not only to the mission at Killalpannina but also to Birdsville, to the stations at Andrewilla, Alton Downs, Pandie Pandie, Mt Gason, and Mundowdna, to Marree, Finniss Springs, Anna Creek, Peake, Oodnadatta, Macumba and Dalhousie. The population became completely fragmented although to this day the descendants of Wangkangurru people are aware of their original unity.

The Wangkangurru 'from the high sandhills' were divided into a number of local groups but they spoke one language. This was still evident in the 1960s: the speech of the people born in the Simpson desert showed no more than the ordinary variation one finds between individuals. One or two younger persons who had been brought up by parents who both came from the desert, and people who spent their early years in a similar environment all spoke in the mikiri way, down to small details of intonation and emphasis. There are now only two people left, two sisters at Birdsville who speak what one might call the pure Simpson desert form of Wangkangurru. Other people of Wangkangurru descent at Birdsville were brought up among speakers of Yarluyandi, Mithaka and Ngurlupurlu. Their speech is still Wangkangurru, but with a few differences particularly in intonation and emphasis, some minor points of grammar and the use of particles (see Hercus MS). Their singing style is also different: Mick McLean was always intrigued by his friend and distant relative Johnnie Reese, who was born on Alton Downs, singing Wangkangurru songs 'other people's way'. Similarly the descendants of Wangkangurru people who were living far away to the west among speakers of the closely related Arabana language tended to have an Arabana accent and were influenced to varying degrees by Arabana grammar. Two people were said to be 'mixed up' and this indeed seemed to be the case. Another person spoke with a Diyari accent. In 1965 there remained only two Wangka-tjari speakers, whose ancestors had come from the Kallakoopah, and had belonged to the Karla-nganha or Marlupapu-nganha group. They had spent some time at Killalpannina and knew Diyari well but did not speak with a Diyari accent.

Anyone who has heard the people who were born in the Simpson desert cannot but have been impressed by their strong sense of unity, the sense of 'my own mob' which encompassed
the local groups using the different soaks. This unity was reflected in the language. But by now, over eighty years since the ‘Wangkangurru of the high sandhills’ left their homes in the Simpson Desert this exodus has had its full effect and there are almost as many variants of Wangkangurru as there are speakers. It seems inevitable that in years to come this fragmentation of the language will continue. Already now members of the younger generation, even siblings, vary considerably as to what and how much, sadly in fact if anything, they have learnt of the Wangkangurru language mikiri-nganha ‘from the soaks’, Mungathirri-nganha ‘from the high sandhills’.

**ORTHOGRAPHY**

A practical orthography has been used in this paper. Plosives have been written as unvoiced, i.e. k, t, th, p, except for the retroflex which has been written as rd, since it is always voiced in Wangkangurru. The prestopped nasals and laterals (which are not phonemic) have been written as dn, dh, pm, dlh, dl. Retroflex consonants have been indicated by an r: rd, rn, rl. Interdental consonants have been indicated by h: dh, nh, lh. Palatal consonants have been indicated by j: tj, nj, lj.

In the case of prestopped consonants and homorganic consonant clusters, retroflex, dental and palatal consonants have been indicated only once, by r, h, and j respectively, rnd, not rnr; dnh not dhnh; nti, not njti. The three r-sounds of Wangkangurru are represented as follows:

- r is a front flap
- rr is a front trill
- R is retroflex

**ABBREVIATIONS**

The following abbreviations have been used for linguistic terms in the interlinear gloss:

| ABL  | Ablative case                      | HIST | historical past            |
| ACC  | accusative case                    | IMP  | imperfective               |
| ACT  | active stem-forming suffix        | LOC  | locative case              |
| ADV  | adverbial suffix                  | NAR  | narrative past             |
| ALL  | allative case                     | PAST | past tense                 |
| ANC  | ancient past                      | PERF | perfect                    |
| CAUS | causative case                    | PLUP | pluperfect                 |
| CONT | continuous participle             | POS  | possessive suffix          |
| CONT S| continuous stem-forming suffix   | PRES | present tense              |
| DIST | aspect showing distance in time or space | PUNC | punctiliar present          |
| EMPH | emphatic clitic                   | PURP | purposive                  |
| ERG  | ergative case                     | SP   | speed form, indicating action undertaken |
| EXCL | exclusive pronoun                 | TR   | transitory aspect          |
| HAB  | habitual aspect                   |      |                            |
