Figure 4.13. South, west and north sections of Savidug Dune Site trench QR/7-9.	58
Figure 4.14. Savidug Dune Site: a burial jar excavated in 2006.	58
Figure 4.15. Savidug Dune Site: the lidded burial jar excavated in QR/7-9.	59
Figure 4.16. Savidug Dune Site KL/28-29, boulder house foundation.	61
Figure 4.17. Savidug Dune Site: monochrome Asian export ceramics.	61
Figure 4.18. Savidug Dune Site: two burial jars exposed in trench E1-G1/9-11.	63
Figure 4.19. Savidug Dune Site: complete burial jar in E1-G1/9-11.	63
Figure 4.20. Savidug Dune Site: the jar in Fig. 4.19.	64
Figure 5.1. A plot of all the Batanes calibrated radiocarbon dates.	72
Figure 5.2. Oxcal 3.10 plots of marine shell and food residue dates older than 2500 cal. BP from Torongan Cave (TN), Anaro 3, Sunget, and Savidug Dune Site.	73
Figure 5.3. The four proposed phases for Batanes prehistory.	75
Figure 6.1. Decorated sherds from Torongan and Reranum Caves.	78
Figure 6.2. Rim forms from Torongan Cave, Chaolaiqiao and Donghebei.	79
Figure 6.3. Jar rims from Reranum shelter.	80
Figure 6.4. Undecorated rims from Anaro and Mitangeb.	83
Figure 6.5. Modal body sherd thicknesses (mm) at Anaro 3 (2004) by depth from surface.	84
Figure 6.6. Reconstruction of an Anaro circle-stamped type 1 vessel, and rims of Anaro circle-stamped types 2A and 2B.	89
Figure 6.7. Surface finds of rims of Anaro circle-stamped types 3A and 3B.	90
Figure 6.8. Examples of decorated pottery appendages from Anaro.	91
Figure 6.9. Decorated human figurine fragments from Anaro.	92
Figure 6.10. Corrugated rims from Mitangeb and Anaro (Batanes) and Sembiran (Bali).	94
Figure 6.11. A range of pottery appendages from Anaro.	96
Figure 6.12. Profiles of Sunget pottery.	98
Figure 6.13. Circle-stamped sherds, two loop handles and a lid knob from the Sunget excavations.	99
Figure 6.14. Open bowls with stamped circle decoration, handles, knobs and lids from Sunget.	100
Figure 6.15. Vessel group excavated from layer 4 in the Savidug Dune Site in 2006.	101
Figure 6.16. Circle-stamped sherds from the Savidug Dune Site.	102
Figure 6.17. Bowl sections compared from Savidug QR/7-9 and Anaro 3B.	103

Figure 6.18. Hole-mouthed rim section compared from Savidug QR/7-9 and Anaro 3B.	105
Figure 6.19. Jar rims compared from Savidug QR/7-9 and Anaro 3B.	106
Figure 6.20. Jar rims with external applied bands from Savidug QR/7-9.	107
Figure 6.21. Bulbous spout of a vessel for holding liquids from Savidug Dune Site QR/7-9.	109
Figure 6.22. Naidi phase pottery from Batan sites.	112
Figure 6.23. Late phase and ethnographic pottery from Batan Island.	113
Figure 7.1. The archaeological distribution of spindle whorls in Neolithic Southeast Asia.	115
Figure 7.2. Baked clay spindle whorls from Sunget, Anaro and Savidug.	118
Figure 8.1. Lithic artefacts collected from Sunget, Batan, in 1982.	125
Figure 8.2. Grooved (scarfed) adzes from Anaro and Taiwan.	127
Figure 8.3. Stepped adzes from Anaro, Taiwan and Fujian.	129
Figure 8.4. Broken adze butts and blades from Anaro surface collections.	130
Figure 8.5. Complete (and other) adzes from the Batanes Islands and other locations.	131
Figure 8.6. Hoe-like tools from Anaro.	133
Figure 8.7. Bark cloth beaters from Anaro.	134
Figure 8.8. Taiwan slate points, point butts and knives and from Sunget and Anaro.	135
Figure 8.9. Side-notched pebble sinkers from Sunget, Savidug Dune Site, and Taiwan.	138
Figure 8.10. Grindstones and polishing stones from Anaro, Savidug Dune Site and Mitangeb.	139
Figure 8.11. Metal, bone and glass artefacts from Batanes sites.	141
Figure 8.12. Baked clay ornaments from Anaro and Savidug Dune Site.	143
Figure 8.13. Shell artefacts from Anaro.	144
Figure 8.14. Shell artefacts from Savidug Dune Site.	146
Figure 9.1. Chemical compositions of nephrite artefact matrices, and chemical compositions of zinc-bearing chromite inclusions in the surfaces of nephrite artefacts.	151
Figure 9.2. Nephrite adze from Sunget; three pointed <i>lingling-o</i> and pelta-shaped nephrite segment from Savidug.	152
Figure 9.3. Possible nephrite prototypes for the <i>lingling-o</i> type of penannular earring with three pointed circumferential projections from Taiwan, Lanyu, Savidug Dune site and Cagayan Valley.	153
Figure 9.4. Nephrite adzes from Anaro.	155
Figure 9.5. Fragments of circular ring-shaped nephrite ornaments from Anaro.	156
Figure 9.6. Drilled-out nephrite biconical and conical cores, and flat circular discs, from Anaro.	157
Figure 9.7. Pelta-shaped nephrite segments and star-shaped central discard from Anaro.	158
Figure 9.8. Other worked fragments of nephrite from Anaro.	159
Figure 9.9. A fragment of a muscovite bracelet from Anaro.	160
Figure 9.10. Green nephrite <i>lingling-os</i> and double animal-headed ear pendants from the Tabon Caves, Palawan.	161
Figure 9.11. The distribution of green nephrite ornaments in the Philippines.	162

Figure 9.12. Examples of white nephrite adzes from the Philippines.	163
Figure 9.13. The distribution of white nephrite adzes in the Philippines.	164
Figure 9.14. “Mindoro jade” (muscovite) disc beads from Ulilang Bundok, southern Luzon.	165
Figure 9.15. The distribution of “Mindoro jade” (muscovite) ornaments in the Philippines.	166
Figure 10.1. A pig right humerus from Savidug B11 (60–70 cm) demonstrating a spiral fracture and ‘tearing’.	172
Figure 10.2. Close up of the cut marks on antero-medial margins of the medial epicondyle of a goat left humerus from Anaro 3E (30–40 cm).	173
Figure 10.3. Fragment of bone from Savidug Dune Site B9 (80–90 cm) demonstrating the parallel grooving along a fracture margin characteristic of rodent gnawing.	175
Figure 10.4. The pig body part representation from Anaro.	179
Figure 10.5. The goat body part representation from Anaro.	184
Figure 10.6. The occlusal and labial aspects of the viverrid left mandible from Anaro 6 (80–90 cm).	185
Figure 10.7. A probable fishing gorge from Anaro 3A (80–90 cm).	186
Figure 10.8. The pig body part representation from Savidug Dune Site layer 4.	188
Figure 10.9. The ventral and caudal aspects of a dog basioccipital from Savidug Dune Site QR 7-9, 120–130 cm.	188
Figure 10.10. A dog right mandibular condyle from Savidug Dune Site QR 7-9, 110–120 cm, with eight transverse cut marks on the neck.	189
Figure 10.11. A fragment of right tibiotarsus shaft from Savidug Dune Site Q/R 7-9, 110–120 cm.	192
Figure 10.12. The pig body part representation from Savidug Dune Site layer 2.	193
Figure 10.13. The labial and occlusal aspects of the heavily worn cervid right lower 2nd molar recovered from Savidug Dune Site L27 at 0–20 cm.	194
Figure 10.14. The proximal end of a dog 3rd left metatarsal from Callao Cave, northern Luzon.	197
Figure 11.1. Deep oblique cut mark on the right lateral aspect near the base of a Balistidae 1st dorsal spine from Savidug Dune Site.	209
Figure 11.2. Prominent anthropogenic marks on Diodontidae dermal spines from Pamayan.	210
Figure 11.3. Two large dorso-ventral orientated cut marks on the left lateral aspect of a Coryphaenidae abdominal vertebra from Savidug Dune Site.	210
Figure 11.4. Scrape marks on the dorsal surfaces of the left lateral aspect of two Coryphaenidae vertebrae from Savidug Dune Site.	211
Figure 11.5. Contemporary filleting and drying of dolphinfish in the Batanes Islands.	212
Figure 11.6. Fishing gorges from Anaro.	213
Figure 12.1. Graph to show the relative proportions of terrestrial, upper intertidal and ‘other’ marine shell excavated from Torongan in 2005.	217
Figure 12.2. Graph to show the total number of shells (MNI) recovered from each spit of square C, Torongan Cave, Itbayat Island.	218

- Figure 12.3. Graph to show the increasing density of shell by depth in Anaro 3A, Itbayat Island. 219
- Figure 12.4. Graph to show the relative proportions of major species, land snails and 'other' marine shell excavated from Anaro Area 3. 220
- Figure 12.5. Graph to show the relative proportions of major species, land snails and 'other' marine shell excavated from layer 2 of the Savidug Dune Site. 221
- Figure 12.6. Four *Thais tuberosa* specimens from Savidug Dune Site. 222
- Figure 12.7. Dominant species of cowrie represented in layer 2 of the Savidug Dune Site showing levels of fragmentation by comparing fragment (NISP) with estimated minimum number of individual shell (MNI) counts. 222
- Figure 12.8. Graph to show the relative proportions of cowries, land snails and 'other' marine shell excavated from layer 4 of the Savidug Dune Site in 2006. 223
- Figure 12.9. Graph to show the relative proportions of cowries, land snails and 'other' marine shell excavated from layer 4 of the Savidug Dune Site in 2007. 224
- Figure 12.10. Graph to show the relative proportion of cowrie shells (*Cypraea* spp.) within the total shell sample at all levels from Pamayan section A. 226
- Figure 12.11. Graph to show the relative proportions of cowrie shells, land snails and other marine species at Pamayan. 226
- Figure 12.12. Two broken *Tridacna maxima* adze preforms, both from Anaro 3C. 230
- Figure 12.13. Three *Turbo marmoratus* rotating fishhook preforms from Anaro. 231
- Figure 12.14. Two reduced *Turbo marmoratus* opercula from Anaro. 232
- Figure 12.15. Three examples of worked *Turbo marmoratus* from Anaro. 233
- Figure 13.1. The four proposed phases for Batanes prehistory, together with radiocarbon chronologies for the excavated Batanes sites, and contemporary cultural manifestations in Taiwan and Luzon. 238
