

## Contributors to This Issue

Gary B. Blank is an associate professor in the Department of Forestry and Environmental Resources, North Carolina State University. He teaches environmental impact assessment, natural resources management, and historical ecology while advising research in affiliated topics. He also directs the department's undergraduate programs and leads a study abroad course every summer.

Erik Bond is a PhD candidate in sociology at the University of Oklahoma. He received his master's degree in human ecology from the College of the Atlantic in 2012. His research focuses on the relationships between socioeconomic stratification and three major phenomena: attitudes toward environmental preservation, family-formation practices, and intergenerational transmission of human capital.

Karl Bruckmeier studied sociology, philosophy, and economics and received a PhD in sociology from the Free University of Berlin, Germany. He is a professor in the Department of Sociology, National Research University, Moscow. His research interests are environmental policy and natural resource use in agriculture and fisheries. He has taught environmental sociology and human ecology in several European countries.

Liesel Carlsson is a dietitian and lecturer in the School of Nutrition and Dietetics at Acadia University. She holds a Master of Science in Applied Human Nutrition and is a doctoral candidate in strategic sustainable development at Blekinge Tekniska Högskola. She is a member of Food Secure Canada and the Agriculture, Nutrition and Health Academy (LCIRAH). Her research and professional activities center on food security and sustainable food systems.

Daniel Casey is a post-bachelor fellow at the Institute for Health Metrics and Evaluation working on the Global Burden of Disease project's estimates for dietary risk factors. Beyond this work, his main research interest is the application of remotely sensed information to examine social and ecological disparities at local and global scales.

Jonathan Casper is an associate professor in the Department of Parks, Recreation and Tourism Management in the College of Natural Resources, North Carolina State University. He is internationally recognized as a leading researcher on sport and the natural environment. Specific to this project his expertise lies in leveraging large events as informal educational settings (or platforms) and influencing behavior change.

Majda Črnič Istenič holds a PhD in sociology and is a professor of rural sociology at the University of Ljubljana, Slovenia. Her research focuses on rural sociology, rural gender studies, and rural demography.

C. B. Christensen, BA (Hons), MA, and Dr. Phil., works in German philosophy of the late 19th and early 20th centuries, with emphasis on the phenomenology of Husserl and Heidegger; and in the philosophy of technology and sustainability. He has also worked in analytical philosophy, on the history of philosophy (Descartes, Kant, Hegel, and Marx) and on critical theory.

Antonio Cid has a degree in environmental science from Pablo de Olavide University, Seville, Spain, and a specialization in environmental engineering from the University of Concepción, Chile. He is currently a research fellow and doctoral student of environmental studies at Pablo de Olavide University.

Thomas Dietz holds a PhD in ecology from the University of California, Davis. He is currently a professor of environmental science and policy, sociology and animal studies at Michigan State University. He is past-president of the Society for Human Ecology and has won the Gerald R. Young Book Award. His research interests include structural human ecology and environmental decision-making.

Roberto García-Ruiz holds a PhD in ecology from the University of Málaga. He worked for several years at the University of Durham (UK), Imperial College of London (UK), and University of California, San Diego (US). He is a professor of ecology at the University of Jaén, Spain, where he specializes in the biogeochemistry of carbon, nitrogen, and phosphorus in natural and managed ecosystems, and agroecosystems from current and historical perspectives.

Manuel González de Molina holds a PhD in modern history from the University of Granada where he worked as a professor until he joined the University Pablo de Olavide, Seville, Spain, in 2001. He specializes in agrarian history, environmental history, and agroecology. He currently directs research projects studying the historical evolution of countryside using the methodologies of social metabolism.

Gloria Guzmán Casado is an agronomist with a PhD from the University of Córdoba. She has taught in courses, seminars, and postgraduate programs in several universities and was managing director of CIFAED in Granada (2002–2009). She now works as a researcher and associate professor at Pablo de Olavide University, Seville, Spain.

Luc Hens, emeritus professor, holds a PhD in biology from the Vrije Universiteit Brussel (VUB), Belgium. Until 2010 he was chair of the Human Ecology Department, VUB. His research interests concern the elucidation of interdisciplinary instruments for sustainable development. He gives expert

advice in environmental policy on several councils in Belgium and also lectures at universities in Bulgaria, Greece, and Portugal. He is the European editor for *International Journal of Environment, Development and Sustainability*.

Juan Infante Amate is an associate professor of contemporary history at Pablo de Olavide University, Seville, Spain, and member of Agroecosystems History Laboratory. His research interests are related to agriculture, ecology, and history. His PhD studied the environmental history of olive orchards in Andalusia.

Jennifer Rebecca Kelly holds a PhD in sociology and specializations in animal studies and environmental science and policy from Michigan State University, where she is currently an assistant professor of sociology. Her pedagogical work has been published in *International Journal for the Scholarship of Teaching and Learning* and in a book chapter from *Making Sense of Beliefs and Values: Understanding the Global Implications of Human Nature*.

Jessica E. Mayer is a senior market research analyst at Duke Energy Corporation. She earned a Master of Science in Natural Resources within the College of Natural Resources, North Carolina State University, in 2014.

Aaron M. McCright is an associate professor of sociology in Lyman Briggs College, the Department of Sociology, and the Environmental Science and Policy Program at Michigan State University (MSU). He was named a 2007 Kavli Frontiers Fellow in the National Academy of Sciences, served as a 2008–2009 Lilly Teaching Fellow at MSU, and received the 2009 Teacher-Scholar Award and the 2009 Curricular Service-Learning and Civic Engagement Award at MSU.

Mojca Nastran is a researcher and pursuing a doctoral degree in biosciences at the University of Ljubljana, Slovenia. Her research interests include stakeholder participation and management of protected areas, urban green infrastructure, and ecosystem services.

Salvatore Saporito is an associate professor of sociology at the College of William & Mary, Virginia, United States, and studies the causes and consequences of racial and economic segregation in urban settings. He is the founder of the School Attendance Boundary Information System (SABINS), a database of tabular and spatial data consisting of elementary, middle, and high school attendance zones across the United States.

Erin Seekamp is an associate professor in the Department of Parks, Recreation and Tourism Management in the College of Natural Resources, North Carolina State University. Her research focuses on conservation behaviors, partnerships, and community capacity within the human dimensions of natural resource

management and sustainable tourism fields. She has collaborated with Illinois-Indiana Sea Grant on numerous aquatic invasive species prevention projects within the Great Lakes region.

David Soto Fernández is an associate professor of contemporary history at Pablo de Olavide University, Seville, Spain. He holds a PhD in contemporary history from the University of Santiago de Compostela with a thesis read in 2003 entitled *Productive Transformations in Contemporary Galician Agriculture: Organic Agriculture to the Green Revolution (1752–1986)*.

Evert Van de Vliert is professor emeritus, Faculty of Behavioral and Social Sciences, University of Groningen, The Netherlands. He has published more than 200 articles, chapters, and books including *Climate, Affluence, and Culture* (Cambridge University Press, 2009). His current research concentrates on the interactive impacts of climatic cold and heat, wealth resources, and parasitic diseases on creativity, freedom, and other aspects of human culture.

Robin van Tine is a professor of biology and GreenFaith Fellow, teaching environmental studies, human ecology, evolution, global climate change, and energy courses at Saint Leo University, Florida, United States. He holds a PhD in marine ecology from the College of William & Mary. His research interests include systems ecology and modeling, ecopsychology, ecotheology, environmental economics, sustainability, environmental and social justice, environmental philosophy, environmental literature, environmental ethics, and comparative cultural cosmology.
